

Mail.XML 16.0 Technical Specification

Data Distribution

September 12, 2014

Prepared by
United States Postal Service

Release Version Support

This document contains information pertaining to Mail.XML release version 16.0 and the following USPS *PostalOne!* Releases:

- Release 38 August 2014
- Release 39 November 2014

Technical Support from the USPS Help Desk and Tier 2 Support

The USPS provides Mail.XML technical support for mailers/vendors and support is only specific to the business rules it pertains to implementation of business transactions, error codes/descriptions and exception handling with the Mail.XML implementations.

The USPS does not provide nor is it equipped to provide technical support for software development tools or IDEs (Integrated Development Environments) like Visual Studio, and software development related activities as they pertain to different technology specific programming environments for different companies, such as .Net, Java, Visual Basic, Power Builder, C, C++ etc.

The Mailer/vendor is responsible for obtaining technical support and assistance directly from the IDE vendor such as Microsoft or IBM or Sun/Oracle for software development related help needs.

Trademarks

The following trademarks are owned by the United States Postal Service:

ACS™, CASS™, CASS Certified™, Certified Mail™, DMM®, FAST®, First-Class™, First-Class Mail®, Full-Service ACS™, IM®, IMb™, IMb Tracing™, Intelligent Mail®, OneCode ACS®, OneCode Solution®, PLANET Code®, *PostalOne!*®, POSTNET™, Postal Service™, Priority Mail®, Registered Mail™, RIBBS™, Standard Mail®, The Postal Service®, United States Postal Service®, USPS®, USPS.COM®, ZIP®, ZIP Code™, ZIP + 4® and ZIP+4™.

IDEAlliance and Mail.dat are registered trademarks of the International Digital Enterprise Alliance, Inc. (IDEAlliance).

Sun, Sun Microsystems, and Java are trademarks or registered trademarks of Sun Microsystems, Inc.

Microsoft, Microsoft Windows, and Microsoft Internet Explorer are registered trademarks of Microsoft Corporation.

TABLE OF CONTENTS

1. Postal Service Mail.XML Technical Specification.....	11
1.1 Program Overview	11
1.2 General XML and Web Services Information	14
1.3 About Schema Modularization	15
1.4 What Schemas Cover Data Distribution Functionality?	16
1.5 USPS® Limitation Rule on Transaction Requests	16
1.6 Roadmap of Mail.XML	16
1.7 Purpose.....	17
1.8 Intended Audience	17
1.9 About This Document	17
1.10 Issue Resolution	18
1.11 How to Read Data Structure	18
1.12 Environments supported by USPS	18
1.13 <i>PostalOne!</i> WSDL Information.....	18
1.14 Mail.XML Workflow	19
1.15 Exceptions	19
2. Full-Service Data Feedback	20
2.1 Full-service Data Feedback Overview	20
2.2 Fulfillment of Unassociated ACS records	31
2.3 ACS Billing	31
2.4 Deactivating Full Service Data Feedback for Delinquent Accounts	31
2.5 General Considerations when using Full-service Query Request messages	31
3. Message Choreography for Data Distribution	32
3.1 Mail.XML 16.0 Data Feedback Messages	34
4. Mail.XML 16.0 Complex and Attribute Groups Definitions	77
4.1 Complex Type: addressCorrectionAddressType	77
4.2 Complex Type: addressCorrectionType	77
4.3 Complex Type: addressType	79
4.4 Complex Type: allDeliveryApptCloseoutAcceptType	79
4.5 Complex Type: basicReturnInfoType	80
4.6 Complex: byForConflictType.....	80
4.7 Complex Type: clockStartedType	82
4.8 Complex Type: cofCCreateRejectType	86
4.9 Complex Type: consigneeFacilityType	87
4.10 Complex Type: containerErrorWarningBlockType	87
4.11 Complex Type: containerGroupType	87
4.12 Complex Type: containerVisibilityEntry	88

4.13 Complex Type: contentDetailInfoType.....	89
4.14 Complex Type: dataRecipient.....	89
4.15 Complex Type: deliverySummaryType	89
4.16 Complex Type: dqrContainerInfoType	90
4.17 Complex Type: foreignAddressType	92
4.18 Complex Type: gPSCoordinates	92
4.19 Complex Type: groupContainerIDType	93
4.20 Complex Type: iMbMailpieceScanData.....	93
4.21 Complex Type: intelligentMailBarcodeType	94
4.22 Attribute Group: largeTransactionDivideGroupOptionalType.....	94
4.23 Attribute Group: largeTransactionDivideGroupType	95
4.24 Attribute Group: largeTransactionDivideResult	95
4.25 Complex Type: mailDatContainerIDType	95
4.26 Complex Type: mailPieceGroupCreateType	95
4.27 Complex Type: mailPieceGroupType	96
4.28 Complex Type: mailPieceIDType	96
4.29 Complex Type: mailXMLContainerIDType	96
4.30 Attribute: mailXMLHeaderInfo.....	97
4.31 Complex Type: mIDType	97
4.32 Complex Type: mPSRequestTypeType	97
4.33 Complex Type: nixieDetailType	97
4.34 Complex Type: nonComplianceDataWithPostageOwedReportType	99
4.35 Complex Type: permitPublicationDataType	100
4.36 Complex Type: scanEventType	100
4.37 Complex Type: scanSTCCCount	101
4.38 Attribute: statusRequestMsgHeaderInfoType.....	102
4.39 Complex Type: submittingParty, participantIDType	102
4.40 Complex Type: submittingSoftware	103
4.41 Complex Type: verificationErrorType	103
5. Mail.XML 16.0 Simple Types	104
5.1 simpleType: actionCodeType	104
5.2 simpleType: additionalInHomeRangeType	104
5.3 simpleType: addressCorrectionMoveType	104

DOCUMENT CHANGES

Change History of previous versions are found in the Change History Archive, Section 7.

Data Distribution, Mail.XML 16.0 for Release 18 (November 2014) Edition 4 Change 1:

Date	Section	Title	Description
9/3/14	1.6	Roadmap of Mail.XML	Removed AddressCorrectionAddressType and AddressCorrectionInfoBlockType from table 1-2

Data Distribution, Mail.XML 16.0 for Release 18 (November 2014) Edition 4 Change 0:

Date	Section	Title	Description
8/26/14	Various	N/A	Updated cover page, footer to reflect Edition 4 publication date
8/26/14	1.6	Roadmap of Mail.XML	Corrected message name NonComplianceDataWithPostageOwedReportQueryResponse in table 1-2
8/26/14	2	Various sub-sections	Corrected non-functional/out-of-date hyperlinks throughout
8/26/14	3.1.29	NonCompliance Data With Postage Owed Report Query Response	Corrected message name in section & table
8/27/14	2.1.3	Why XML-Based Data Feedback?	Removed reference to obsolete Mail.XML version
8/27/14	4.16, 3.1.16, 3.1.13	Various	Corrected fsdqrContainerInfoType to dqrContainerInfoType
8/27/14	2.1.7	Error/Return Codes	Added cross-reference to table 2-2 from repeated error codes in table 2-4.
8/28/14	5.109	SimpleType: MailXML ContainerType	Removed note re: Mail.XML V12.0B on Air Box; added missing value "CT" (carton)
8/28/14	1.1.1.1	Support for Mailer Submitter Tracking ID on Mail.XML Messages	Removed references to Mail.XML V12.0.

1. Postal Service Mail.XML Technical Specification

1.1 Program Overview

The *PostalOne!*[®] system is an electronic suite of services being developed for business mailers by the United States Postal Service[®] to improve the mailing process. The system takes advantage of the advances in technology and leverages them to continuously improve and simplify the mailing experience.

Customers can electronically send detailed information to the *PostalOne!* system using the mailing industry's standardized Mail.XML™ format. Mail.XML is an XML-based IDEAlliance[®] specification for web services. Web services use simple HTTP(s) protocols to communicate data over the Internet, bypassing technology-specific restrictions and avoiding network-related security rules. See the IDEAlliance Mail.XML specifications at <http://www.idealliance.org>

All business functions supported by the USPS as part of the Mail.XML implementation are based on SOA (Services Oriented Architecture). This architecture enables a mailer's software to manage the data transactions to query, create, update, and cancel various data sets representing business functions and subscription model. Additionally, mailers' software is able to receive synchronous and asynchronous transactions through Web Services protocol from the USPS in support of the just-in-time communication architecture.

The Postal Service's implementation of Mail.XML is a complement to Mail.dat. Mailers using Mail.dat can continue to use it as a database, but can use Mail.XML for communication and automation of business-to-business processing. Mail.XML allows business function-specific communication and faster change management processes with little to no impact to other service providers. For example, you can add optional fields or new messages without requiring software in the mailing supply chain to change.

Mail.XML allows the support of electronic documentation and end-to-end mailing supply chain business process management for a multitude of business processes, including qualification reports, container and bundle reports, spoilage, elinduction, containerization nesting, postage statements, postage adjustments, postage status query information, piece detail, piece ranging, and many other business process related communications. Mail.XML also provides the ability to electronically access USPS full-service data and to perform business functions related to full-service. Mail.XML supports copalletization, mixed mailing, manifest mailing, and business processes specific to MLOCR and continuous mailing environments.

One fundamental difference between the Mail.dat files and Mail.XML messages is the information content. For example, for qualification reports and postage statements Mail.dat calculates from the raw data in several Mail.dat files, the copies and pieces at each price level in the qualification report and the postage statements. This sometimes leads to round-off differences as compared to qualification reports and postage statements calculated by the mailer using the same Mail.dat file. In Mail.XML, the mailer provides the numbers of copies and pieces for each price level directly and there are less round-off errors.

The [Postal Service Mail.XML Technical Specification](#) is documented by subject matter into the following volumes:

- Postal Service Mail.XML Technical Specification for Postage Payment & Reporting (eDoc)
- Postal Service Mail.XML Technical Specification for Appointment Scheduling (FAST)
- Postal Service Mail.XML Technical Specification for Profiles & Full-Service Feedback (MID-CRID)
- Postal Service Mail.XML Technical Specification for data distribution message functionalities for full-service data. (DD)

This document focuses solely on the data distribution message functionalities for Full-Service data.

1.1.1 Mail.XML 16.0

Support for an expanded Company Name is to be added for Data Distribution Mail.XML 16.0. Company Name will support up to 255 characters instead of the previous 40 characters.

Support to identify Political Mail and Election Mail separately is to be added for Data Distribution Mail.XML 16.0.

Error reporting is improved for Push subscriptions in Data Distribution Mail.XML 16.0.

The following messages are not supported in Data Distribution Mail.XML 16.0:

- AllApptCloseoutDelivery
- AllApptCloseoutNotification
- StaleContentDelivery

- StateContentNotification
- USPSSDeliveryContentUpdatedDelivery
- USPSSDeliveryContentIUpdatedNotification

1.1.1.1 Support for Mailer SubmitterTrackingID on Mail.XML Messages

Business Requirements

All currently supported Mail.XML versions accept 'SubmitterTrackingID' on Mail.XML request messages. The value is set by the mailer and the *PostalOne!* system will make use of this to identify the duplicate requests and avoid processing the duplicate messages submitted. The sections below provide more details on the Mail.XML Service Layer and target applications processing 'SubmitterTrackingID'.

Business Rules/ Assumptions

1. Mailers provide a SubmitterTrackingID as part of their request messages.
2. SubmitterTrackingID is currently required in Mail.XML 16.0 specification.
3. The *PostalOne!* system will use the SubmitterTrackingID (required) to ensure that Mailer's requests were processed one time only by Mail.XML and target applications.
4. Mailer must provide a unique combination of SubmitterTrackingID/MessageName for 45 days in order to support these requirements.
5. The *PostalOne!* system will use the combination of UserID/SubmitterTrackingID/ MessageName to identify duplicate requests from the Mailers. Please note that the business requirements call for 48 hours but we recommend 45 days to be consistent with other Full Service uniqueness requirements.
6. *PostalOne!* applications will include the SubmitterTrackingID (required) in Mail.XML responses and error messages.
7. *PostalOne!* applications generate responses or error messages for all Mail.XML requests.
8. *PostalOne!* applications will use the following elements to identify and handle duplicate requests:
 - a. UserID
 - b. MessageName
 - c. TrackingID (Mail.XML app assigns this)
 - d. SubmitterTrackingID (required)
 - e. RequestReceived DateTime (Mail.XML app assigns this)
9. Duplicate messages will be identified for mailers with the SubmitterTrackingIDs provided in their requests.
10. If no response was received from the target application for a given request during the 48-hour window, the request will be considered obsolete and no response will be provided using MessageResponseRetrievalResponse (MRRR). An error message will be provided back to the Mailer in the MRRR response as shown in the example below.

MailXML 14.0A Example MRRR:

```

<mailxml:MessageResponseRetrievalResponse
    xmlns:mailxml="http://idealliance.org/Specs/mailxml14.0A/mailxml"
    xmlns:mailxml_base="http://idealliance.org/Specs/mailxml14.0A/base"
    xmlns:mailxml_defs="http://idealliance.org/Specs/mailxml14.0A/mailxml_defs"
    xsi:schemaLocation="http://idealliance.org/Specs/mailxml14.0A/mailxml mailxml_14.0A.xsd">
    <mailxml:MessageResponseRetrievalReject
        mailxml:TrackingID="59201312180000033524">
            <mailxml:ReturnInfo>
                <mailxml_defs:ErrorWarning>
                    <mailxml_defs:Code>1510</mailxml_defs:Code>
                    <mailxml_defs:Severity>Information</mailxml_defs:Severity>
                    <mailxml_defs:ErrorDescription>The TrackingID provided in the MRRR
request was processed by Mail.XML application on Wed Dec 18
22:19:34 CST 2013. No response was received by Mail.XML from the
target application.</mailxml_defs:ErrorDescription>

```

```

<mailxml_defs:Action>Please submit the request again or contact
PostalOne! Help Desk</mailxml_defs:Action>
</mailxml_defs:ErrorWarning>
</mailxml:ReturnInfo>
</mailxml:MessageResponseRetrievalReject>
</mailxml:MessageResponseRetrievalResponse>

```

1.1.1.2 Duplicate Request Scenarios

Scenario 1:

1. Mailer sends the first request with a unique SubmitterTrackingID.
2. Mail.XML application receives the request, captures the information below and routes the request to the target application for processing
 - a. UserID
 - b. MessageName
 - c. TrackingID (Mail.XML app assigns this)
 - d. SubmitterTrackingID (assigned by the Mailer)
 - e. RequestReceived DateTime (Mail.XML app assigns this)
3. Mailer sends the second request with the same SubmitterTrackingID.
4. Mail.XML application checks the request, assigns TrackingID and performs validation for the duplicate message.
5. If it is a duplicate message Mail.XML will not forward request to the target application. An error message will be generated by the Mail.XML application and returned back to the mailer as follows:
 "Duplicate submitter ID. This Mail.XML request for *MessageName* with SubmitterTrackingID *Number* was not processed by Mail.XML application because an identical request was received on *Day Date Time* and was assigned TrackingID of *Number*."
6. Mailer to use MRRR message with TrackingID *Number* to retrieve the responses.

Scenario 1 MailXML 14.0A Example:

```

<?xml version="1.0" encoding="UTF-8"?>
<mailxml:Fault xmlns:mailxml="http://idealliance.org/Specs/mailxml14.0A/mailxml"
  xmlns:mailxml_base="http://idealliance.org/Specs/mailxml14.0A/base"
  xmlns:mailxml_defs="http://idealliance.org/Specs/mailxml14.0A/mailxml_defs"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://idealliance.org/Specs/mailxml14.0A/mailxml mailxml_14.0A.xsd ">
  <mailxml:ErrorWarning>
    <mailxml_defs:Code>502</mailxml_defs:Code>
    <mailxml_defs:Severity>Error</mailxml_defs:Severity>
    <mailxml_defs:SubmissionDate>2014-01-21T01:04:23</mailxml_defs:SubmissionDate>
    <mailxml_defs:ErrorDescription>Duplicate submitter ID. This Mail.XML request for Message
DeliveryApptCreateRequest with SubmitterTrackingID 496200001401210168 was not processed by Mail.XML application
because an identical request was received on Tue Jan 21 13:02:35 CST 2014 and was assigned TrackingID of
54201401210024376205.</mailxml_defs:ErrorDescription>
    <mailxml_defs:Action>Please use the MRRR message with Tracking ID 54201401210024376205 to
retrieve.</mailxml_defs:Action>
    <mailxml_defs:TrackingID>54000000000024376246</mailxml_defs:TrackingID>
    <mailxml_defs:SubmitterTrackingID>496200001401210168</mailxml_defs:SubmitterTrackingID>
    <mailxml_defs:MailxmlDetail>
      <mailxml_defs:MailXMLVersion>14.0A</mailxml_defs:MailXMLVersion>
      <mailxml_defs:MailXMLMsgSize>2806</mailxml_defs:MailXMLMsgSize>
      <mailxml_defs:MailXMLMsgName>DeliveryApptCreateRequest</mailxml_defs:MailXMLMsgName>
    </mailxml_defs:MailxmlDetail>
  </mailxml:ErrorWarning>
</mailxml:Fault>

```

Scenario 2:

Mailer sends original request followed by another identical request. No response is made available by the target application for the original request.

1. Mailer sends the first request with a unique SubmitterTrackingID.
2. Mail.XML application receives the request, captures the information below and routes the request to the target application for processing
 - a. UserID
 - b. MessageName
 - c. TrackingID (Mail.XML app assigns this)
 - d. SubmitterTrackingID (assigned by the Mailer)
 - e. RequestReceived DateTime (Mail.XML app assigns this)
3. Mailer sends the second request with the same SubmitterTrackingID.
4. Mail.XML application checks the request, assigns TrackingID and performs validation for the duplicate message.
5. If it is a duplicate message Mail.XML will not forward request to the target application. An error message will be generated by the Mail.XML application and returned back to the mailer as follows:
 "Duplicate submitter ID. This Mail.XML request for *MessageName* with SubmitterTrackingID *Number* was not processed by Mail.XML application because an identical request was received on *Day Date Time* and was assigned TrackingID of *Number*"
6. Mailer uses MRRR message with TrackingID mmmmmmm to retrieve the responses.
7. Target Applications generate the response for the initial/first request. Mail.XML application will generate a Come Back Later message if no response is available.

Scenario 2 Mail.XML 14.0A Example:

```
<?xml version="1.0" encoding="UTF-8"?>
<mailxml:Fault xmlns:mailxml="http://idealliance.org/Specs/mailxml14.0A/mailxml"
  xmlns:mailxml_base="http://idealliance.org/Specs/mailxml14.0A/base"
  xmlns:mailxml_defs="http://idealliance.org/Specs/mailxml14.0A/mailxml_defs"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://idealliance.org/Specs/mailxml14.0A/mailxml mailxml_14.0A.xsd ">
  <mailxml:ErrorWarning>
    <mailxml_defs:Code>1502</mailxml_defs:Code>
    <mailxml_defs:Severity>Warning</mailxml_defs:Severity>
    <mailxml_defs:SubmissionDate>2014-01-24T04:11:14</mailxml_defs:SubmissionDate>
    <mailxml_defs:ErrorDescription>Come Back Later</mailxml_defs:ErrorDescription>
    <mailxml_defs:Action>The response is not available at this time, Please try again later.</mailxml_defs:Action>
    <mailxml_defs:TrackingID>54201401240024477052</mailxml_defs:TrackingID>
    <mailxml_defs:SubmitterTrackingID>1267091</mailxml_defs:SubmitterTrackingID>
    <mailxml_defs:MailxmlDetail>
      <mailxml_defs:MailXMLVersion>14.0A</mailxml_defs:MailXMLVersion>
      <mailxml_defs:MailXMLMsgSize>855</mailxml_defs:MailXMLMsgSize>
      <mailxml_defs:MailXMLMsgName>AllDeliveryApptCloseoutRequest</mailxml_defs:MailXMLMsgName>
    </mailxml_defs:MailxmlDetail>
  </mailxml:ErrorWarning>
</mailxml:Fault>
```

1.2 General XML and Web Services Information

XML

XML stands for eXtensible Markup Language and it is designed to transport and store data. For general information on XML, please visit <http://www.w3schools.com/xml/default.asp>

XSD

An XSD is the XML Schema that describes the structure of an XML document. For general information on XSD, please visit <http://www.w3schools.com/Schema/default.asp>

Web Service

A Web Service is a feature that converts your software into internet-based software and publishes its functions/message to the users of the internet. For general information on Web Services, please visit:

<http://www.w3schools.com/webservices/default.asp>

<http://www.w3schools.com/wsdl/default.asp>

<http://www.w3schools.com/soap/default.asp>

1.3 About Schema Modularization

Mail.XML messages are grouped into six sets:

- Transportation Messages
- Mailing Messages
- Data Distribution Messages
- Identification Messages
- Supply Chain Messages
- System Messages

The underlying schemas have been modularized to reflect these distinct message sets. Additionally, three “shared” or “common” schemas have been developed and they are:

1. One stores simple Mail.XML Mailing Message Specification type definitions that can be shared across message sets.
2. A second common module is made up of common elements and complex types that are shared across two or more message sets.
3. The final common module is made up of system messages and the attributes, elements and complex types that are *unique* to these messages.
4. Mail.XML schema modules are designed to stand alone, separated by business functions, enabling those interested in one or more message sets to develop and validate just those message sets without the requirement to address the entire Mail.XML specification. Each module will validate by itself or in combination with all other message sets when the entire Mail.XML Specification is considered. In addition, each module will be versioned separately.
5. Version numbers are contained within the namespace designation. Modules will be documented individually as well.

The following Mail.XML XSD modules/namespaces have been developed:

- **mailxml_tm.xsd:** This module contains all the transportation (or FAST) messages with their attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml_tm**
- **mailxml_mm.xsd:** This module contains all the mailing messages (eDoc) with their attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml_mm**
- **mailxml_dd.xsd:** This module contains all the data distribution messages with their attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml_dd**
- **mailxml_id.xsd:** This module contains all the identification messages (CRID, MID etc.) with their attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml_id**
- **mailxml_sc.xsd:** This module contains all the supply chain messages (Cross-functional container based and other Mail.dat/mail.XML update functions) with their attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml_sc**
- **mailxml.xsd:** This module contains all the system messages with their attributes, elements and complex types that are *unique* to these messages. Note that in order for the MessageResponseRetrievalResponse to work, all the other message modules are included by the system.xsd. **Namespace=mailxml**
- **mailxml_defs.xsd:** This module contains all the common definitions of attributes, elements and complex types that are used across one or more message types. **Namespace=mailxml_defs**

- **mailxml_base.xsd:** This module contains all the simple types that are used everywhere in the mailxml. These simple types are associated with every element of each message. **Namespace=mailxml_base**

1.4 What Schemas Cover Data Distribution Functionality?

With the breakdown of XSD into multiple schemas – the Data Distribution functionality will be covered by mailxml_dd.xsd module and mailxml_id.xsd.

In addition to the above modules, mailxml_base.xsd and mailxml_defs are common/shared XSD that will be referred by each of these individual Data Distribution specific modules.

Lastly, mailxml.xsd module will be the source XSD that will connect all messages to their system level attributes. For example – MessageResponseRetrievalResponse is shared attribute/complex type associated to almost every single Mail.XML message regardless of whether it is a Data Distribution functionality or FAST or eDoc functionality. The other examples are DeliveryResponse, NotificationResponse, Fault, etc.

1.5 USPS® Limitation Rule on Transaction Requests

USPS has recently encountered unordinary high volume with specific Mail.XML transactions by FAST and Full-service Data Distribution users, which is causing a serious performance impact on several USPS servers that deal with authorization of all of the Mail.XML transactions.

The Postal Service is requiring that the USPS Mail.XML customers update their Mail.XML software to query the USPS *PostalOne!/FAST* and Data Distribution systems no more than seven times per hour. Similarly, USPS customers are encouraged to set up their web services pull software to query the *PostalOne!* servers **no more than 200 times in a given 24-hour period** for their eDoc, FAST, or Full-service related data queries. This change is required for all customers. It will greatly assist in avoiding performance issues that can hinder quality of service; users still have many opportunities to query necessary postal data within this limitation. Likewise, in order to improve overall experience for all customers it is absolutely necessary that customers program their software to query the USPS systems for different transactions at different times, i.e., configure some queries to occur at odd times, e.g., FAST queries to occur at odd times while eDoc and Data distribution to occur at even times.

Note: The above statements and limitations are under review by the USPS. Updates to this section will be provided in the next Mail.XML technical specification publication.

1.6 Roadmap of Mail.XML

The table below shows the roadmap of the Mail.XML versions, starting from versions supported in October 2013 to versions that will be supported through November 2014 for Data Distribution.

October 2013 Release 36.0	January 2014 Release 37.0	August 2014 Release 38.0	November 2014 Release 39.0
Mail.XML 11.0D Mail.XML 12.0A Mail.XML 12.0B	Mail.XML 11.0D Mail.XML 12.0A Mail.XML 12.0B Mail.XML 14.0A**	Mail.XML 11.0D* Mail.XML 12.0A Mail.XML 12.0B Mail.XML 14.0A Mail.XML 16.0**	Mail.XML 12.0A Mail.XML 12.0B Mail.XML 14.0A Mail.XML 16.0

Table 1-1 Roadmap of Mail.XML for Data Distribution Functionality

*Note: The version(s) flagged with a double asterisk (**) are new version(s), which are planned for implementation with the release date. Version(s) flagged with a single asterisk (*) are being retired with the release date.*

The table below lists all Mail.XML Profiles and Full-Service Data Feedback related messages that are supported in version 16.0.

Message Name	Supported in Mail.XML 16.0
AddressCorrectionDelivery	X
AddressCorrectionNotification	X
AddressCorrectionQueryRequest	X
AddressCorrectionQueryResponse	X
ByForConflictDelivery	X
ByForConflictNotification	X

Message Name	Supported in Mail.XML 16.0

Table 1-2 Messages supported in Data Distribution Mail.XML 16.0

1.7 Purpose

The purpose of this Technical Specification is to supplement the IDEAlliance Mail.XML specification and to provide the Mail.XML users with specific information regarding the USPS implementation. This document serves as the collection of all specific rules, standards, accepted values, error messages, etc. regarding the USPS implementation of the Mail.XML specification. The content in this document is subject to change as IDEAlliance updates the Mail.XML Specification.

This technical specification includes the return codes, error codes and their descriptions, as well as the WSDLs links for the USPS Mail.XML implementation. This specification also lists all of the return codes, and error codes with their descriptions for each message supported in Mail.XML 16.0.

1.8 Intended Audience

The intended audience for this specification is technical programmers and technical managers. Prior knowledge of XML language, Mail.XML and Mail.dat functionalities will greatly improve the understanding of this document. The majority of the codes used in the Mail.XML base XSD come from the Mail.dat specification, the USPS recommends reading the *Postal Service Mail.dat Technical Specification* to understand the meaning of the flags used by IDEAlliance in Mail.XML. The code descriptions for simple types that are coming from the Mail.dat specification have been added as part of the simple type table for added benefit to the reader.

1.9 About This Document

In the messages data structure table, complex types have been referenced. To properly implement the Mail.XML messages, USPS recommends the customer study the complex types provided in Appendix A of this specification to fully understand the structure of the Full-Service Data Distribution messages.

Also in the messages data structure, simple types have been referenced under the acceptable values column. USPS recommends that the customer study the simple types to fully understand the cryptic meaning of the codes that are being used in the simple types. For example, "Mail Class" simple type allow values 1, 2, 3, or 4, where the translations of these codes are 'First-Class Mail', 'Periodicals', 'Standard Mail', and 'Package Services', respectively. The USPS also recommends reading the *Postal Service Mail.dat Technical Specification* document located on RIBBS®.

In the data structure tables, some field names may contain spaces for readability purposes because the names of those fields are lengthy. In Mail.XML, spaces are not allowed in the element names. For example: "SubmittingParty" is the element name but in the data table it may have been written as "Submitting Party". If you are using this document to code your software then use the latest version of [Mail.XML XSD](#) located on RIBBS® to fully understand the name of the element, structure of every block and message to minimize the impact of incorrect coding.

1.10 Issue Resolution

All issues identified in the USPS software that may not correspond with the business rules identified in this specification and that require workarounds are listed in the critical issues list on the RIBBS Intelligent Mail site under Latest News. For example – In some cases the work around for Full-Service ACS data is to receive the data through OneCode ACS method instead of Full-Service method. In other cases for postage statements too big in size, the work-around is to divide the statements in multiple statements. The current Critical Issues list of the *PostalOne!* system is found at: [Intelligent Mail Services Latest News](#)

1.11 How to Read Data Structure

There are three possibilities for every element listed in the data structure table of each message. These possibilities are required, optional, and conditionally required. The required option means that mailer/preparer or sender of the message must provide data for the element. Whereas optional option means the sender of the message has a choice to include the data or omit it from submission. The third option of Conditionally Required means that if certain condition is met then the sender of the message must provide data for that particular element; for example - EntryPointEDPostalCode is conditionally required if EntryPointEDFacilityType is populated in the ContainerUpdateRequest message.

In addition to the above options, there are instances where the main block is marked as required but the elements within the block are optional or vice versa. This means that sender of the message must include the block when sending the message but can omit all elements within the block. A good example is 'submittingparty' block, which is a required block, but all elements within this block are optional.

1.12 Environments supported by USPS

The USPS supports both a test environment and a production environment.

Testing Environment for Mailers (TEM): This environment is used for software approval processes for all mailers prior to moving into the production environment. Mailers must work with the *PostalOne!* Help Desk to start the approval process for their software, and must be approved in the TEM environment, prior to sending Mail.XML data transactions in the Production environment. The TEM environment for Mail.XML basic testing capabilities is available as of November 2009 and will be available for all future releases. For more information regarding TEM, see the *Test Environment for Mailers: Checklist and Troubleshooting Guide*

Production Environment: This Production environment will be used by all customers approved by USPS to start sending messages and transactions. These customers will be approved as a result of performing required tests in the TEM environment.

1.13 *PostalOne!* WSDL Information

All web services transactions that are made with the USPS should comply with the WSDL specification, which are posted on RIBBS® and can be downloaded from the following location: [Web Service Description Language \(WSDL\) Specification](#).

A web services request must include a valid and active USPS User ID and Password as defined in the UserAuthenticationInfo.xsd file that is provided as part of the WSDL files. A typical web service message construct defined is as follows:

```
<wsdl:message name="DeliveryApptContentUpdateRequest">
  <wsdl:part name="authInfo" element="auth:AuthenticationInfo"/>
  <wsdl:part name="apptContentUpdate" element="tns:apptContentUpdate"/>
</wsdl:message>
```

With the following

String-typed WSDL:

```
<wsdl:message name="StartTheClockQueryRequest">
  <wsdl:part element="auth:AuthenticationInfo" name="authInfo"/>
  <wsdl:part element="tns:startTheClockQuery" name="startTheClockQuery"/>
</wsdl:message>
```

XSD-typed WSDL:

```
<wsdl:message name="StartTheClockQueryRequest">
  <wsdl:part element="uspsxml: StartTheClockQueryRequest" name="StartTheClockQueryRequest"/>
</wsdl:message>
```

USPS will validate and authenticate the user information before processing the request. An error message will be returned in response to the web service request for invalid user information.

Types of WSDLs

USPS only accepts Message-Type WSDLs.

Consuming Message-Type WSDLs

The message-type WSDL eliminates the need to manually register each service and message type. With this method, a customer can use an automated tool to setup their environment without manually registering each service. However, this approach requires updates to WSDLs every time a new Mail.XML version is released. In other words, it is tightly coupled with the Mail.XML Specification Version. The USPS has transitioned to this type of Message WSDLs to remove manual editing and registering of messages.

Customer must use message-type URLs to consume these services. These URLs are provided in Section 7.

1.14 Mail.XML Workflow**Full-service Feedback Messages Workflow**

There are two ways a user receives Full-Service Feedback data, a) the Push Delivery and b) the Pull methods. All messages that end with a word 'Notification' or 'Delivery' are part of Push Delivery method and all messages that end with a word 'Request' or 'Response' are part of Pull method. To start receiving the data via Push Delivery method the user must subscribe to Push Delivery service via USPS – Business Customer Gateway accessible through the web at: [Business Customer Gateway](#). For details on how to subscribe to Push Delivery and more description on the Pull and Pull method – refer to sections 2 and 7 of this document.

Profile Management messages Workflow

All messages in the Profile Management families follow the Pull method where a user sends a request and expects to receive either data or an error/return code.

Messages, including CRID or MID creation messages, do not need to be requested or sent in any particular order.

1.15 Exceptions

The following is the list of exceptions identified by USPS.

Mail.XML Version	Exception Description
ALL	The customer should not zero pad their MID and CRID IDs

Table 1-3 Mail.XML exceptions identified by USPS

2. Full-Service Data Feedback

2.1 Full-service Data Feedback Overview

The Full-Service program will utilize the *PostalOne!* system to provide Start-the-Clock, Container Visibility, Confirm (Full-Service only), Address Correction Data, Nixie Detail data, and Full-service Data Quality reports to the customers identified as recipients of full-service feedback.

There are a number of ways by which all of the Full-service data feedback messages will be exchanged through the *PostalOne!* System as described below:

Options for Data Exchange					
No	Data/Service	Browser-based HTTPS Download (Compressed Files)	Browser-based Report (over HTTPS)	Mail.XML Pull (Customer Invokes USPS Web Service)	Mail.XML Push (USPS Invokes Customer Web Service)
1	Start-the-Clock	Yes	Yes	Yes	Yes
2	Container Visibility/Scan	Yes	Yes	Yes	Yes
3	ACS COA	Yes	No	Yes	Yes
4	ACS Nixie Detail	Yes	No	Yes	Yes
5	Full-service eDoc Data Quality Verification	No	Yes(Microstrategy Reports)	Yes	Yes
6	Full-service noncompliance postage	No	Yes(Microstrategy Reports)	Yes	Yes

Table 2-1 Full-service Data Exchange Options

FTP – File Transfer Protocol method. FTP support is phasing out to meet USPS Security standards for secured, guaranteed solutions. Any USPS services that currently provide data through the FTP protocol to its customers will provide ample time and communication to the USPS customers and collaborate with the customers to help with transition before transitioning to the non-FTP protocol data communication methods.

Browser-based HTTPS (Hyper Text Transport Protocol - Secure) Download (Compressed Files) – Online web page allowing customers to download ‘compressed data’ over HTTPS protocol in a CSV or Excel format.

Browser-based HTTPS Reports – Online web page allowing customers to view ‘reports’ over HTTPS.

Mail.XML Pull (Customer Invokes USPS Web Service) - Web Services Pull model where a customer sends a Web Services-based Mail.XML Request message invoking USPS Web Services to pull data in XML format through a Mail.XML Web Service method.

On the response provided, it would include TrackingID as part of ‘LargeTransactionDividerResult’. Whenever a mailer application sees this element, they need to send MessageResponseRetrievalRequest (using the correct Mail.XML version XSD) and use the TrackingID provided to get the response.

For example, if a mailer sends ‘NixieDetailQueryRequest’ and the *PostalOne!* system has to send a large result set as a response (1000 messages broken down into 200 messages per transaction). The *PostalOne!* system will return a response with the first 200 messages and include five TrackingIDs as part of the ‘LargeTransactionDividerResult’.

Mailer can send TrackingID request and get the remaining data. Additionally, the element ‘LargeTransactionDividerGroupType’ can give more information on what is included on each transmission.

Refer to Section 2.1.5 for more information.

Mail.XML Push (USPS Invokes Customer Web Service)-Web Services Mail.XML Push model where the USPS invokes a customer’s Web Service method/URL and pushes XML data to the customer’s web service when the data is available or a notification is sent to the customer by the USPS that customer’s data is available for download. Refer to Section 2.1.4 for more information.

In support of Full-service feedback messages that large are in size, the Mail.XML specification has an element "LargeTransactionDividerGroupOptionalType" to support such transactions for Push. The *PostalOne!* system will divide the large result set into smaller chunks.

2.1.1 What you need to receive your data through the data exchange methods identified

Step 1

The customers must be registered *PostalOne!* users and must registered Business Customer Gateway users with a valid username and password. For information on the Business Customer Gateway, refer to the [User Access to Electronic Mailing Information and Reports Guide](#), Volume 1 on RIBBS.

Visit the *Business Customer Gateway (BCG)* home page at [Business Customer Gateway](#) to begin participating in Mail.XML and to obtain access to the *PostalOne!* system. If you have questions, call the *PostalOne!* systems Help Desk at (800) 522-9085.

Once you are a registered user and have the ability to access the *PostalOne!* system you will have access to the browser-based HTTPS reports and data download options as well. You will have the ability to perform electronic data exchange with the *PostalOne!* system through approved methods.

Step 2

The customers interested in automated electronic data exchange currently have four options available to them for receiving electronic data from the USPS for full-service mailings.

- Browser-based HTTPS Download (Compressed Files) - The first available data exchange option is secure browser-based compressed file download. No other information for full-service will be available through browser-based download method, other than Address Correction and Nixie Detail data.
- Browser-based HTTPS Reports - The second option available to customers is viewable browser-based reports. The only data that is currently available through browser-based reports is Start-The-Clock and Container Visibility data.
- Mail.XML Pull (Customer Invokes USPS Web Services) – The Mail.XML is an IDEAlliance specification and does not require any IDEAlliance fee to use/implement the specification. The latest version of Mail.XML is available at the [IDEAlliance Mail.XML](#) site. Customers can pull their information whenever they desire, using Request and Response methods for StartTheClock, Container Scans, ACS, and Nixie data.
- Mail.XML Push (USPS Invokes the Customer's Web Services) – USPS provides online push subscription pages as well as web services methods so that the customer can register with the *PostalOne!* system as a subscriber of detail data (Delivery messages) or as a subscriber of notifications (Notification messages) that tell the customer, when data is ready to be pulled. The customer can register to receive automatically, either a) the detail data, or b) the notifications as they pertain to StartTheClock, Container Scans, Full-service ACS COA, and Full-service ACS Nixie data.

The Mail.XML specification is a USPS/industry agreed to strategic and future communication method for data exchange. It is bi-directional, near real time, and can convert large data transactions into smaller transactions while providing guaranteed delivery, verification and near real time conflict resolution capabilities. The sender and receiver can validate the data, verify guaranteed delivery and actually converse intelligently both ways to report any issues with data transfer or with business issues found within the data.

2.1.2 How do you implement/use the Mail.XML available for Full-Service Data Feedback?

The user should download the XSD, the data dictionary and support documents from the following link: [IDEAlliance Mail.XML](#).

Check for the versions supported by the USPS at [Intelligent Mail Schedule 2014](#), or the [Full Service 2014 Releases](#) home page under Important Links -> Mail.dat and Mail.XML Version Schedule.

2.1.3 Why Mail.XML-Based Data Feedback?

Mail.XML was created to enhance efficiency and ease of transmission for the small and large data volume communications. The message sets were designed with an attribute that allows all large data volume messages to be broken up in as many unique child transactions as the USPS and the industry feel will be supported by the existing network infrastructure. In other words, a 10MB file can be broken up in ten 1MB transactions or twenty 500KB in size transactions except for Address Correction and Nixie messages where the messages will be broken between 450-600KB. The Mail.XML allows for verification and thorough validation of the data, right away, in near real time. More importantly, with Mail.XML, your software can respond back to the *PostalOne!* system right away to let the USPS know if you successfully received all the data or not. You can also let the USPS know right away if the data sent by the USPS to you had problems, the data was bad or incomplete or did not belong to you, etc., so automatic conflict resolution triggers can

result in immediate action by the USPS. Mail.XML expands the same capabilities to other data types. Mail.XML adds more validation by introducing changes to simple types and later versions further streamline the XSD structure to fix previously identified exceptions such as making the SubmittingParty and other elements optional in all data distribution messages. Modularization of XSD has been introduced which will streamline the process of implementing the code.

Another important feature for your business is that unlike Mail.dat, there are almost no wait times for you to file your postage, qualification, and container and bundle reports with the USPS since you are filing final documents.

Prerequisite:

All customers who want to receive Full-Service data feedback must be registered *Business Customer Gateway* users. The customer must have gone through the *Gateway* approval and activation process for this business function and must establish push subscription profiles in the Push Subscription user interface to provide data distribution guidance for their data. The data distribution authorization is driven by the data provided in the eDocumentation to the *PostalOne!* system about the By/For relationship. The MID profiles if setup by the customer, take precedence on authorization rules over the eDoc data.

The Full-Service data is provided electronically to the USPS customers in two ways. One method is through manual download of data in CSV (Comma Separated Values) and Microsoft Excel application formats available through Business Customer Gateway online pages. Second method is of an automated data exchange, using IDEAlliance Mail.XML specification and web services technology. With Mail.XML method, the customer can periodically query USPS *PostalOne!* system for their information or can subscribe for their data and receive it automatically from the USPS *PostalOne!* server to their (customer's) server. Mail.XML based data exchange requires that the customer buy software that is capable of exchanging information with the USPS through SOAP protocol or that the customer code (programs) the software with Mail.XML capabilities.

Customers can login through Business Customer Gateway, go to Full-Service reports link to search for specific ACS and StartTheClock data for their mailings, and download the data in a CSV or Excel format.

Note: *The Data Quality reports are available through manual download format, online reports, and through Mail.XML format, however we do not encourage manual download of this detail data because the data would only make sense once merged/linked with the mailing eDoc data in customer's systems.*

Customers also have the ability to conduct all Full-Service data exchange electronically and automatically through IDEAlliance Mail.XML web services implementation by the USPS.

2.1.4 What is Push Model/Subscription method?

If you want to automatically receive the data as soon as it is ready (Push model), you must have registered your Web Services URL, implemented a WSDL for push (Delivery and Notification) Mail.XML messages, and implemented Authentication and Authorization to authenticate and authorize transactions sent by the *PostalOne!* system to your server. You also must have installed a signed SSL certificate from VeriSign or Comodo on your server, which is setup to receive push transactions from the USPS. You will also be asked to provide your IP address, server's physical address and other pertinent information to the Help Desk in the TEM Full-service Data Feedback using Push Messages – Customer Identification Form that can be downloaded from RIBBS at [TEM Mail.XML Forms](#).

With the Mail.XML Push or subscription method, the USPS customers can login to the USPS Business Customer Gateway and under Full-service subscription link can provide a user id, password, and a URL that the *PostalOne!* system can use to connect and send data to the customer's server.

On the Business Customer Gateway, the USPS customer can schedule how often they want to receive their Full-Service data. They have the choice to get the data every 6, 12, or 24 hours.

The WSDLs and XSDs available at the end of this document MUST be used to ensure conformity and standardization of data exchange between the *PostalOne!* system and customers. Within the Gateway system, a user interface allows you to provide the information and indicate which messages you want to receive as a Push model. You must have also checked the type of data you want to receive as a Push. All push messages **end** in the word "Delivery" or in the word "Notification." Messages that **start** with the word "Delivery" are usually specific to the FAST system.

The messages that end with the word "Delivery" mean that the message has all the detail data and the customer is receiving the data because the customer registered with the USPS *PostalOne!* system to receive the detail data as it becomes available.

The messages that end with the word "Notification" mean that the message will notify the customer that the "data is ready" to be pulled through Pull Mail.XML mechanism or another approved method. Notification messages will not have detail data. The customer will have the option to choose the push messages that they want the *PostalOne!* system to use and

send the data to the customer. e.g., a customer may decide to use Pull messages for ACS, but may decide to receive continuous feeds of data for StartTheClock “Delivery” message or Nixie “Delivery” message and may choose to receive the notifications through the Notification messages.

Getting Ready for Push Data Distribution Checklist

Details about ‘How to Subscribe to Mail.XML Push Messages’ are outlined in the [‘Test Environment for Mailers \(TEM\) Checklist and Troubleshooting’](#) document on RIBBS. In this section – high-level steps are provided for an overall understanding of the workflow:

Enable SSL communication with USPS® TEM and Production environment. Refer to the *‘Test Environment for Mailers (TEM) Checklist and Troubleshooting’* document.

Customer must acquire a signed certificate to enable SSL (secure socket layer) communication with USPS®, which allows secure data exchange between USPS® and customers server on port 443.

Through Business Customer Gateway – access the Push Subscription Profile user interface and setup Subscription profile

During Subscription profile setup – user has two options i.e. Subscribe to Notification and Subscribe to Delivery. Customer can subscribe to one push type.

During the subscription setup process, the customer must determine how frequently they would like to receive the notification or delivery.

Customers must provide their servers’ web service URL, User Name, and Password. This will allow USPS® *PostalOne!* system to connect to customer’s server and start pushing the notification or deliver the message.

Customer must setup their Web Service to access USPS® TEM and USPS® Production environment and provide the Web Service URL during the subscription process.

Download and implement USPS® provided WSDLs. See WSDL Information below for more details.

2.1.5 What is Pull Model?

If a customer wants to get the data based upon their own needs and wants to pull the data from the *PostalOne!* system, they will not need to host their own Web Services URL. They will need the software that can send a message request to the *PostalOne!* system for any available data and the *PostalOne!* system will respond back with the data. The customer will need to be approved and activated by the USPS to be able to use this software in production.

With the Mail.XML Pull method, the USPS customers can have their software query the USPS *PostalOne!* System for their ACS, Nixie, Start-the-Clock, Container-Visibility, By-For-Conflict, Non-Compliance Data, and Data Quality reporting data. The Query filters include job id information and other mail owner or appointment information as applicable for the type of data being pulled. There are Query Request and Response messages where the Query request is done by the USPS customer’s software and the USPS responds back with the Query Response message with the data.

2.1.6 Message Response Retrieval Request (MRRR) Processing

Fault and Fault Recovery Messages

This series of messages is primarily used to support the asynchronous communication when the response from the USPS may not be within 7 seconds and the USPS returns a Tracking ID to the customer. The customer then uses the Tracking ID to get his message response back using the MRRR message set that includes:

- Message Response Retrieval Request
- Message Response Retrieval Response

Customer will have the ability to retrieve the responses of all of the messages documented in this specifications using TrackingID in the MRRR messages. Tracking IDs become stale after 24 hours.

2.1.7 Error/Return Codes

Faults, such as a message timeout or invalid XML are to be communicated using the fault element and returned within the detail section of the SOAP fault. The fault is made up of a Tracking ID and one or more fault codes and optional fault descriptions. Note all of the Error/Return Codes listed below are supported in versions of Mail.XML

Below is the list of fault codes that are applicable to all Mail.XML messages. They are sent whenever a fault occurs in the transmission of the message.

Code	Description	Action*	Messages	Severity
401	Incomplete/Cannot Parse	Please submit the request again	Fault (All Mail.XML)	Error

Code	Description	Action*	Messages	Severity
		with well-formed XML according to XSD.	Messages)	
402	Not Well Formed XML	Please submit the request again with well-formed XML according to XSD.	Fault (All Mail.XML Messages)	Error
403	Request XML is invalid against the XSDs	Please submit the request again with well-formed XML according to XSD.	Fault (All Mail.XML Messages)	Error
412	Invalid user	Please submit the request again with a valid user.	Fault (All Mail.XML Messages)	Error
440	Sorry - MailXML version is not supported	Please submit the request again with MailXML version supported by PostalOne Data Distribution System.	Fault (All Mail.XML Messages)	Error
500	Mail.XML generic internal error	Please contact PostalOne! Help Desk.	Fault (All Mail.XML Messages)	Error
501	MailXML request is missing 'SubmitterTrackingID' which is required for processing the Message	Please submit the request again with SubmitterTrackingID.	Fault (All Mail.XML Messages)	Error
502 ¹	Duplicate submitter ID. This Mail.XML request for Message #messageName# with SubmitterTrackingID #submitterTrackingID# was not processed by Mail.XML application because an identical request was received on #submitDate# and was assigned TrackingID of #trackingID#.	Please use the MRRR message with Tracking ID #trackingID# to retrieve.	Fault (All Mail.XML Messages)	Error
503	Not Implemented - MailXML message received is not supported	Please submit the request again with MailXML message supported by <i>PostalOne!</i> Data Distribution System.	Fault (All Mail.XML Messages)	Error
505 ¹	Submitter tracking ID is too long	Please submit the request again with SubmitterTrackingID length not exceeding the length specified in the Tech Spec.	Fault (All Mail.XML Messages)	Error
1500	Invalid tracking ID	Please submit the request again with a valid Tracking ID.	Fault (All Mail.XML Messages)	Error
1502 ²	Come Back Later	The response is not available at this time, Please try again later.	Fault (All Mail.XML Messages)	Warning
1502	Come Back Later	The response is not available at this time, Please try again later.	MessageResponseRetrievalResponse	Warning
1510	The TrackingID provided in the MessageResponseRetrievalResponse request was processed by Mail.XML application on #processedDate#. No response was received by Mail.XML from the target application.	Please submit the request again or contact <i>PostalOne!</i> Help Desk.	Fault (All Mail.XML Messages)	Information
1600	MRRR version not matching original request version.	Please submit the MRRR request again using the same MailXML version that was used to submit the original request.	Fault (All Mail.XML Messages)	Error
5101 ³	Unauthorized - Required SubmittingParty information is empty or missing.	Please submit the request again with valid SubmittingParty block.	Fault (All Mail.XML Messages)	Error

Code	Description	Action*	Messages	Severity
5102 ³	Unauthorized - User does not have access to specified SubmittingParty.	Please submit the request again with valid SubmittingParty block or contact <i>PostalOne!</i> Help Desk.	Fault (All Mail.XML Messages)	Error
5103 ³	Unauthorized - User does not have access to 'Manage Mailing Activity' service.	Please contact <i>PostalOne!</i> Help Desk.	Fault (All Mail.XML Messages)	Error

¹ Error code 501 was used for any Submitter Tracking ID error. In Release 37, Error Codes 502 and 505 are used to enable distinction between Submitter tracking ID errors.

² Error Code 500 was used for any generic error and Come Back Later faults. In Release 37, Error Code 1502 is used for any Come Back Later message for consistency.

³ Error Code 412 was used for any User Error. In Release 37, Error Codes 5101, 5102 and 5103 are used to enable distinction between user errors.

* Action tags are only available for Mail.XML specs 14.0A and above.

Table 2-2 Fault Codes

Below is the list of the codes to be returned by the Customer to the *PostalOne!* system in the Delivery Response message to indicate the success or the failure of the delivery messages to the Customer's web services endpoint.

Code	Description	Messages
5800	Successful Push Delivery Receipt	DeliveryResponse NotificationResponse
5801	Push Authentication failed: Invalid Username	DeliveryResponse NotificationResponse
5802	Push Authentication failed: Incorrect Password	DeliveryResponse NotificationResponse
5803	Push Account Disabled	DeliveryResponse NotificationResponse
5804	Push Delivery Processing Failed	DeliveryResponse NotificationResponse

Table 2-3 *PostalOne!* – Data Distribution – Delivery Response Return Code Values

Below is the list of the return codes that the *PostalOne!* system will communicate to the customer in response to the Push Subscription request message to indicate the success or the failure of the subscription request.

Code	Description	Messages
5805	Push Subscription Error: Invalid CRID.	ProfileResponse
5806	Push Subscription Error: Invalid message type.	ProfileResponse
5807	Push Subscription Error: Invalid Push type.	ProfileResponse
5808	Push Subscription Error: Invalid user ID and/or password.	ProfileResponse
5809	The web service URL format is invalid.	ProfileResponse
5810	Push Subscription Error: Push Start date is invalid.	ProfileResponse
5811	Push Subscription Error: Invalid frequency.	ProfileResponse
5812	Push Subscription created successfully.	ProfileResponse
5813	Push Subscription updated successfully.	ProfileResponse
5814	Push Subscription cancelled successfully.	ProfileResponse
5815	Push Subscription Error: Database error occurred, subscription not saved/updated.	ProfileResponse
5816	Push Subscription Error: Database error occurred, subscription already exists.	ProfileResponse
5817	Push Subscription Error: Database error occurred, subscription does not exist.	ProfileResponse
5900	No records found for the given search criteria	AddressCorrection QueryResponseContainerVisibilityQueryResponseDataQualityV

Code	Description	Messages
		erificationReportQueryResponseNixieDetailQueryResponseStartTheClockQueryResponseByForConflictQueryResponse

1510	The TrackingID provided in the MessageResponseRetrievalResponse request was processed by Mail.XML application on #processedDate#. No response was received by Mail.XML from the target application. Please submit the request again or contact <i>PostalOne!</i> Help Desk.* (See table 2-2)	All Mail.XML messages

Table 2-4 *PostalOne!* Subscription Request Return Code Values

Below is the list of return codes that the *PostalOne!* System will communicate to the customer in response to Data Distribution Messages:

Note: These Error/Return Codes below will be updated ONLY if the CR is in the IDEAlliance xsd, not the custom xsd to the *PostalOne!* system.

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7106	By/For Verification	The Mail Preparer was not identified for the physical piece due to an invalid Mailer ID(.mpa)
7107	By/For Verification	The Mail Preparer was not identified for the physical piece due to an invalid CRID(.mpa)
7108	By/For Verification	The Mail Preparer was not identified for the physical piece due to an invalid Mailer ID(QualReport)
7109	By/For Verification	The Mail Preparer was not identified for the physical piece due to an invalid CRID(QualReport)
7110	By/For Verification	The Mail Preparer was not identified for the physical piece due to no Mail Preparer identifiers in the eDoc
7111	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid Mailer ID(.cpt)
7112	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid Mailer ID(.mpa)
7113	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid CRID(.cpt)
7114	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid CRID(.mpa)

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7115	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid Mailer ID(MailPiece)
7116	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid CRID(MailPiece)
7117	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid CRID(QualReport)
7118	By/For Verification	The Mail Owner was not identified for the physical piece due to no Mail Owner identifiers in the eDoc
7119	By/For Verification	The Mail Owner was not identified for the physical piece due to invalid permit information(.mpa)
7120	By/For Verification	The Mail Owner was not identified for the physical piece due to invalid permit information(MailPiece)
7121	By/For Verification	The Mail Preparer was not identified for the physical piece due to invalid permit information(QualReport)
7122	By/For Verification	The Mail Preparer was not identified for the piece range due to invalid permit information(QualReport)
7123	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid publication number(.mpa)
7124	By/For Verification	The Mail Owner was not identified for the physical piece due to an invalid publication number(MailPiece)
7125	By/For Verification	The Mail Preparer was not identified for the physical piece due to an invalid publication number(QualReport)
7126	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid publication number(QualReport)
7127	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid Mailer ID(.imr)
7128	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid CRID(.imr)
7129	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid Mailer ID(PieceRange)
7130	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid Mailer ID(QualReport)
7131	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid CRID(PieceRange)
7132	By/For Verification	The Mail Preparer was not identified for the piece range due to an invalid CRID(QualReport)
7133	By/For Verification	The Mail Preparer was not identified for the piece range due to no Mail Preparer identifiers in the eDoc
7134	By/For Verification	The Mail Owner was not identified for the piece range due to an invalid Mailer ID(.imr)
7135	By/For Verification	The Mail Owner was not identified for the piece range due to an invalid CRID(.imr)
7136	By/For Verification	The Mail Owner was not identified for the piece range due to an invalid Mailer ID(Piece Range)
7137	By/For Verification	The Mail Owner was not identified for the piece range due to an invalid CRID(PieceRange)
7138	By/For Verification	The Mail Owner was not identified for the piece range due to an invalid CRID(QualReport)
7139	By/For Verification	The Mail Owner was not identified for the piece range due to no Mail Owner identifiers in the eDoc

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7140	By/For Verification	The mail owner and preparer were identified by the same CRID. The owner should directly benefit from the mailing and pay postage directly or by way of a mailing agent.
7141	By/For Verification	The mail owner and preparer where identified as the same business entity. The owner should directly benefit from the mailing and pay postage directly or by way of a mailing agent.
7142	By/For Verification	The identified owner has previously been identified as a mail preparer. The owner should directly benefit from the mailing and pay postage directly or by way of a mailing agent.
7143	By/For Verification	The identified owner is a known mail service preparer. The owner should directly benefit from the mailing and pay postage directly or by way of a mailing agent.
7239	CSA Verification	The CSA ID was not provided in the eDoc(.seg/.csm or QualReport) for the Origin entered Container when a First Class CSA exists in FAST based on the Mail Facility ID and Processing Category
7240	CSA Verification	The CSA from the eDoc(.seg/.csm or QualReport) is invalid or a match cannot be found in FAST for the associated container record(.csm or QualReport)
7242	CSA Verification	The CSA associated to an eDoc Container record(.csm or QualReport) does not have an Active status in FAST
7243	CSA Verification	The eDoc Scheduled Ship/Induction Date(.csm or QualReport) is before the CSA Effective Date in FAST for the associated container record(.csm or QualReport)
7244	CSA Verification	The eDoc Principal Processing Category(.seg or QualReport) does not match the CSA Processing Category in FAST for the associated eDoc container record(.csm or QualReport)
7245	CSA Verification	The eDoc Container Level Code(.csm or QualReport) does not match the CSA Processing Code in FAST for the associated eDoc container record(.csm or QualReport)
7246	CSA Verification	The eDoc Container Destination ZIP(.csm or QualReport) does not match the CSA Container Destination ZIP in FAST for the associated eDoc container record(.csm or QualReport)
7247	CSA Verification	The eDoc Entry Point Locale Key(.csm or QualReport) does not match the CSA Facility Locale Key in FAST for the associated eDoc container record(.csm or QualReport)
7248	CSA Verification	The eDoc Scheduled Ship/Induction Date(.csm or QualReport) does not match the CSA Day of Week in FAST for the associated eDoc container record(.csm or QualReport)
7301	Mailer ID Verification	The Mailer ID in the IMcb from the eDoc container record (.csm or QualReport) is invalid or cannot be found for the associated container.
7302	Mailer ID Verification	The Mailer ID in the IMtb from the eDoc handling unit record (.csm or QualReport) is invalid or cannot be found for the associated container
7304	Mailer ID Verification	The Mailer ID in the IMb from the eDoc piece record (.pdr or MailPiece) is invalid or cannot be found for the associated piece

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7303	Mailer ID Verification	The Mailer ID in the Piece Range Serialization from the eDoc piece range (.imr or PieceRange) is invalid or cannot be found for the associated piece range
7401	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece record (.pdr or MailPiece) is invalid
7402	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece record (.pdr or MailPiece) indicates the piece is Basic for a Full-Service Piece as part of a Full-Service or Mixed Job
7403	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece record (.pdr or MailPiece) indicates a Mail Class that does not match the Mail Class in the eDoc (.seq or QualReport)
7404	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece range record (PieceRange) is invalid
7405	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece range record (PieceRange) indicates the piece is Basic for a Full-Service Piece as part of a Full-Service or Mixed Job
7406	Service Type ID Verification	The Service Type Identifier in the IMb from the eDoc piece range record (PieceRange) indicates a Mail Class that does not match the Mail Class in the eDoc (QualReport)
7502	Unique Container Barcode Verification	The same Container Barcode(IMcb) from the eDoc(.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs and Mail Facility IDs
7503	Unique Container Barcode Verification	The same Container Barcode (IMcb) from the eDoc (.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, within the same Job and Mail Facility ID
7504	Unique Container Barcode Verification	The same Container Barcode (IMcb) from the eDoc (.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs with the same Mail Facility ID
7605	Unique Handling Unit Barcode Verification	The same Tray Barcode(IMtb) from the eDoc(.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs and Mail Facility IDs
7603	Unique Handling Unit Barcode Verification	The same Tray Barcode (IMtb) from the eDoc (.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, within the same Job and Mail Facility ID
7604	Unique Handling Unit Barcode Verification	The same Tray Barcode (IMtb) from the eDoc (.csm or QualReport) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs with the same Mail Facility ID
7703	Unique Piece Barcode Verification	The same Piece Barcode(IMb) from the eDoc(.csm or MailPiece) was used more than once within the 45 days from the Postage Statement Mailing Date, across Jobs and Mail Facility IDs
7704	Unique Piece Barcode Verification	The same Piece Barcode (IMb) from the eDoc (.pdr or MailPiece) was used more than once within 45 days from the Postage Statement Mailing Date, within the same Job and Mail Facility ID

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7705	Unique Piece Barcode Verification	The same Piece Barcode (IMb) from the eDoc (.pdr or MailPiece) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs with the same Mail Facility ID
7706	Unique Piece Range Barcode Verification	The same Piece Range Serialization(IMb) from the eDoc(.imr or PieceRange) was used more than once within the 45 days from the Postage Statement Mailing Date, across Mail Facility IDs
7707	Unique Piece Range Barcode Verification	The same Piece Range Serialization(IMb) from the eDoc(.imr or PieceRange) was used more than once within 45 days from the Postage Statement Mailing Date, within the same Job and Mail Facility ID
7708	Unique Piece Range Barcode Verification	The same Piece Range Serialization(IMb) from the eDoc(.imr or PieceRange) was used more than once within 45 days from the Postage Statement Mailing Date, across Jobs with the same Mail Facility ID
7901	Delivery Point Verification	IMb does not have a valid 11, 9, or 5 digit delivery point or the 11, 9, or 5 digit delivery point was not active within allowable period of time from the postage statement mailing date
7902	Delivery Point Verification	IMb has a value of '0000' within positions 6-9 of the delivery point
7903	Delivery Point Verification	IMb has a value of '9999' within positions 6-9 of the delivery point and the address record type is not 'General Delivery'
7904	Delivery Point Verification	IMb within the range does not have a valid 11, 9, or 5 digit delivery point or the 11, 9, or 5 digit delivery point was not active within allowable period of time from the postage statement mailing date
7905	Delivery Point Verification	IMb within the range has a value of '0000' within positions 6-9 of the delivery point
7906	Delivery Point Verification	IMb within the range has a value of '9999' within positions 6-9 of the delivery point and the address record type is not 'General Delivery'
7602	Default IMtb Code Error	The eDoc tray barcode(.csm or QualReport) provided is 24 characters and consists entirely of the digit 9 (i.e. 999999999999999999999999)
7016	Entry Facility Verification	The entry facility identified by the Locale Key within the container was unknown in FDB
7017	Entry Facility Verification	The entry facility identified by the Postal Code within the container was unknown in FDB
7018	Entry Facility Verification	The entry facility identified by the Locale Key within the orphan handling unit was unknown in FDB
7019	Entry Facility Verification	The entry facility identified by the Postal Code within the orphan handling unit was unknown in FDB
7020	Service Performance Verification	The Postage Statement Finalization Date is 2 or more days after the Scheduled Ship Date for the DMU Verified, USPS Transported Physical Container
7021	Service Performance Verification	The Postage Statement Finalization Date is 2 or more days after the Scheduled Ship Date for the DMU Verified, USPS Transported Physical Handling Unit

ERROR CODE	REPORT TYPE	FUNCTIONAL DESCRIPTION
7022	Service Performance Verification	The Orphan Handling Unit does not have an induction method of BMEU.

Table 2-5 PostalOne! – Mail Quality Verification Response Return Code Value

2.2 Fulfillment of Unassociated ACS records

Currently, when ACS (Address Change Service) generates COA (Change of Address) and Nixie records with a Full Service STID, these records are sent to SASP for fulfillment. SASP attempts to associate these records to electronic documentation for a period of 35 days. If the ACS records are unable to be associated within the 35-day period, SASP discards the records.

SASP sends reports for records with electronic documentation to the *PostalOne!* system.

SASP sends reports for unassociated and multiple notification (expired) records and provides this feedback to ACS. ACS uses this information to create invoices when appropriate.

2.3 ACS Billing

Currently ACS does not bill for records with a Full Service STID that qualify for Full Service discounts and benefits. These records are fulfilled free of charge through the Full Service platform.

ACS updates the mailpiece records with billing data after receiving the billing files from SASP. As per established ACS billing policies, ACS will generate monthly invoices to send to mailers when account balances are over a configurable value (currently set to \$50); otherwise, invoices will be sent to mailers on March 24th or October 24th.

ACS will send a monthly file to Customer Registration containing all CRIDs to be invoiced. Customer Registration will use this information to retrieve billing contact information for the BSA of managed mailing activity based on the mail owner CRID and will send this information back to ACS in order to generate invoices.

2.4 Deactivating Full Service Data Feedback for Delinquent Accounts

The account of a mail owner that does not make a payment within 30 days of the invoice creation date will be considered a delinquent account. Implementing a new interface between SASP and the *PostalOne!* system will update a Mail Owner's delinquent account status.

ACS sends Mail Owner CRIDs for delinquent accounts to the *PostalOne!* system, which will deactivate the Mail Owner's access to Full Service ACS feedback. Accounts can be reactivated when ACS sends activation records for mail owner CRIDs after a payment has been received.

2.5 General Considerations when using Full-service Query Request messages

With all key fields in Full Service ACS and Nixie requests nullable in the Mail.XML 16.0 Specification, there is a chance that very large datasets may be returned which could potentially cause some performance and timeout issues. Mailers are expected to provide one of the following fields in the Mail.XML request message: Mail.dat Job ID/User License Code or Mailing Group ID or MID on Piece. Mailers are required to limit the date range search to one week only.

3. Message Choreography for Data Distribution

No	Message Name	Description	Customer	USPS PostalOne!
1	AddressCorrectionDelivery	The USPS sends this detail data delivery to the customer with all the data available in the AddressCorrection QueryResponse message		From
2	AddressCorrectionNotification	The USPS sends this notification to the customer and provides the Job information for which the AddressCorrection data is ready		From
3	AddressCorrectionQueryRequest	The customer can request address correction information from the USPS by providing the job information and date ranges and optional piece barcode range information.	From	
4	AddressCorrectionQueryResponse	The USPS, in response to the requests, sends all the address correction data pertinent to the request.		From
7	ByForConflictDelivery	The USPS sends By/For conflict data to the customer.		From
8	ByForConflictNotification	The USPS sends a notification to the customer that the By/For conflict data is ready to be picked up.		From
9	ByForConflictQueryRequest	The customer can request By/For conflict data	From	
10	ByForConflictQueryResponse	The USPS, in response to the requests, sends all the By/For conflict data pertinent to the request.		From
11	ContainerStatusDelivery	The USPS sends the customer container status data.		From
12	ContainerStatusNotification	The USPS sends a notification that container status information is ready to be picked up.		From
13	ContainerVisibilityDelivery	The USPS sends this detail data delivery to the customer with all the data available in the ContainerVisibilityQueryResponse message		From
14	ContainerVisibilityNotification	The USPS sends this notification to the customer and provides the Job information for which the ContainerVisibility data is ready		From
15	ContainerVisibilityQueryRequest	The customer can request container visibility information from the USPS by providing the job information, appointment/trip information, facility id, and container information or container barcodes.	From	
16	ContainerVisibilityQueryResponse	The USPS responds with the Container Induction detail data by providing the latest scan dates and times as well as any conflicts with the container back to the customer.		From
17	DataQualityVerificationReportDelivery	The USPS sends this detailed delivery to the customer with the data quality verification report		From

No	Message Name	Description	Customer	USPS PostalOne!
18	DataQualityVerificationReportNotification	The USPS sends this notification to the customer that the data quality verification report is ready to be picked up.		From
19	DataQualityVerificationReportQueryRequest	The customer sends a message to request the data quality verification report.	From	
20	DataQualityVerificationReportQueryResponse	The USPS responds with the data quality verification report		From
21	DeliveryResponse	This message is used in response to all messages that end in the word 'Delivery'	From	
22	MPSVisDelivery	The USPS sends this detail data delivery to the customer with the detailed MPSVis data.		
23	MPSVisNotification	The USPS sends this notification to the customer MPSVis data is ready to be picked up.		
24	MPSVisQueryRequest	The customer can request MPS Visibility data	From	
25	MPSVisQueryResponse	The USPS responds with MPS Visibility data		From
26	NixieDetailDelivery	The USPS sends this detail data delivery to the customer with all the data available in the NixieDetailQueryResponse message		From
27	NixieDetailNotification	The USPS sends this notification to the customer and provides the Job information for which the NixieDetail data is ready		From
28	NixieDetailQueryRequest	The customer can request Nixie information from the USPS by providing the CRID, MID, and by providing the job information, class of mail, date ranges and optional piece barcode range information.	From	
29	NixieDetailQueryResponse	The USPS, in response to the requests, sends all the Nixie detail data by MID and Job information back to the customer.		From
30	NonComplianceDataWithPostageOwedReportDelivery	The USPS sends the detail data to customer server		From
31	NonComplianceDataWithPostageOwedReportNotification	The USPS sends this notification to the customer providing information on data availability		From
32	NonComplianceDataWithPostageOwedQueryRequest	The USPS customer constructs the message and send it to USPS servers	From	
33	NonComplianceDataWithPostageOwedReportQueryResponse	The USPS responds to the Query Request message with either data or error code through this message.		From

No	Message Name	Description	Customer	USPS <i>PostalOne!</i>
34	NotificationResponse	This message is used in response to all messages that end in the word 'Notification'	From	
37	StartTheClockDelivery	The USPS sends this detail data delivery to the customer with all the data available in the StartTheClockQueryResponse message		From
38	StartTheClockNotification	The USPS sends this notification to the customer and provides the Job information for which the Start-the-Clock data is ready		From
39	StartTheClockQueryRequest	The customer requests the Start-the-Clock data by providing appointment and job information for which Start-the-Clock data is needed. The date range of upper and lower is necessary to receive data from the USPS.	From	
40	StartTheClockQueryResponse	The USPS responds with the Start-the-Clock data for the job and provides the data for plant-loaded mail in the plant-loaded XML block, data for drop Shipped mail in the drop shipped XML block, and BMEU entered mail data in the BMEU XML block.		From

Table 3-1 Message Choreography for Data Distribution

3.1 Mail.XML 16.0 Data Feedback Messages

The section below lists all messages that will be supported in the Mail.XML 16.0 specification. This section spells out the business rules and data structure for each of those messages.

3.1.1 AddressCorrection Delivery

This is a push message to provide address correction

Prerequisites

- Mailer has subscribed to receive AddressCorrection Delivery messages
- ACS Data Recipient Determination Process
 - Mailer submits eDoc for a Job, Postage Statement is Finalized
 - USPS performs By/For Verification
 - USPS validates whether Mail Owner MID provided in CPT/MPA/IMR record in eDoc.
 - USPS identifies Mail Owner by MID based on Order of Preference
 - USPS looks up Data Distribution Profile by Mailer Owner's MID
 - USPS verifies whether Data Distribution Profile Exists
 - USPS determines Data Recipient CRID based on Profile
 - USPS attaches the Data Recipient CRID to the Piece/Piece Range Record
- ACS Association and Feedback Process
 - USPS receives ACS COA records
 - USPS associates ACS COA records with Piece/Piece Range records
 - USPS provides ACS Feedback to Data Recipient CRID attached to the Piece/Piece Range record
 - USPS pushes the AddressCorrection Delivery message to the Mailer's web service end point

Business Rules

With each AddressCorrection Delivery message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the

1. OPTIONAL LargeTransactionDividerGroupOptionalType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions and records to expect and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
 - a. MessageGroupID – It is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10, indicating all the transactions with MessageGroupID 10 are one business transaction.
 - b. TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, where X is a positive integer.
 - c. MessageSerialNumber – Is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the first, second, or third transaction from the TotalMessageCount and for the same MessageGroupID.
 - d. TransmittedRecordCount – is count of records in the current message transaction.
 - e. TotalRecordsAcrossMessages – This is the total expected record count when the receiver of the MessageGroupID has received all messages.
 - f. LastMessage – is a Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.
2. SubmittingParty – The *PostalOne!* system for all Notification and Delivery messages will always put a value of 'USPS' in the MaildatUserLicense field.
3. SubmittingSoftware – The *PostalOne!* system for all Notification and Delivery messages will always put:
 - a. The value of 'PostalOne' in the SoftwareName element
 - b. The value of 'USPS' in the vendor element
 - c. The most current version number available, such as 19.0 or 20.0 in the Version element
 - d. The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements
4. The CRID element is for industry usage and is optional. For the Delivery messages, the *PostalOne!* system will not populate this element.
5. The *PostalOne!* system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.
6. The *PostalOne!* system will send one or more AddressCorrection blocks.
 - a. The *PostalOne!* system will provide Move Type to identify the type of move for Individual, Family or Business (indicated by values 'I', 'F', or 'B' respectively).
 - b. The COAName element will be used to identify the following:
 - i. Individual/Family Move Type = Last Name, First Name, Prefix and Suffix
 - ii. Business Move Type = BusinessName will be utilized to provide business name information
 - c. The ClassNotificationType element will be used to identify the mail class of the mail piece that generated the ACS COA notification for the following values:
 - i. 'A' = Package Services (Bound Printed Matter)
 - ii. 'B' = First-Class
 - iii. 'C' = Periodicals Initial
 - iv. 'D' = Standard Mail
 - v. 'F' = Periodicals Follow-up
 - d. The DeliverabilityCodeType element will be used to identify the deliverability status of the mailpiece that generated the ACS COA notification for the following values:
 - i. <blank> = COA Match with new address
 - ii. 'K' = COA Match, no forwarding address

- iii. 'G' = COA Match, PO Box Closed, no forwarding address
- iv. 'W' = COA Match with a temporary COA
- e. The AddressType element will be used to identify the type of address from which the customer is moving for the following values:
 - i. 'F' = Foreign
 - ii. 'G' = General Delivery
 - iii. 'H' = Highway Contract Route
 - iv. 'P' = Post Office Box
 - v. 'R' = Rural Route
 - vi. 'S' = Street Address
 - vii. 'U' = Urbanization Name
 - viii. 'V' = Highway Contract Route with box number
 - ix. 'X' = Rural Route with box number

3.1.1.1 AddressCorrection Delivery Field Description

AddressCorrection Delivery				
Field	Format	Acceptable Values	Business Rules	Comments
AddressCorrection Delivery BEGINS				
LargeTransactionDividerGroup OptionalType	LargeTransactionDividerGroup OptionalType Attribute block	-	Attribute block	Refer to this attribute block in Section 4
SubmittingParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
SubmittingSoftware	SubmittingSoftwareType complex type	-	Optional	Refer to this complex type in Section 4
DataRecipient	dataRecipient complex type	-	Optional	Refer to this complex type in Section 4
PushMessageID	String, Length 25	-	Optional	-
AddressCorrection	AddressCorrection Type Complex type	-	Required: 1 to many	Refer to this complex type in Section 4
AddressCorrection Delivery ENDS				

3.1.2 AddressCorrectionNotification

This is the Notification message to customer for availability of address correction information.

Prerequisites

Mailer has subscribed to receive AddressCorrection Notification messages

ACS Data Recipient Determination Process

- Mailer submits eDoc for a Job, Postage Statement is Finalized
- USPS performs By/For Verification
- USPS validate whether Mail Owner MID provided in CPT/MPA/IMR record in eDoc.
- USPS identifies Mail Owner by MID based on Order of Preference
- USPS looks up Data Distribution Profile by Mailer Owner's MID
- USPS verifies whether Data Distribution Profile Exists
- USPS determines Data Recipient CRID based on Profile
- USPS attaches the Data Recipient CRID to the Piece/Piece Range Record

ACS Association and Feedback Process

- USPS receives ACS COA records
- USPS associates ACS COA records with Piece/Piece Range records
- USPS provides ACS Feedback to Data Recipient CRID attached to the Piece/Piece Range record
- USPS pushes the AddressCorrection Notification message to the Mailer's web service end point

Business Rules

With each AddressCorrection Notification message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the

1. SubmittingParty – The *PostalOne!* system for all Notification and Delivery messages will always put a value of 'USPS' in the MaildatUserLicense field.
2. SubmittingSoftware – The *PostalOne!* system for all Notification and Delivery messages will always put:
 - a. The value of 'PostalOne' in the SoftwareName element
 - b. The value of 'USPS' in the vendor element
 - c. The most current version number available, such as 19.0 or 20.0 in the Version element
 - d. The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements
3. The CRID element is for industry usage and is optional. For the Delivery messages, the *PostalOne!* system will not populate this element.
4. The *PostalOne!* system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.
5. The *PostalOne!* system will provide the NotificationDate, which is the date when the message is transmitted.

3.1.2.1 AddressCorrectionNotification Field Description

AddressCorrectionNotification				
Field	Format	Acceptable Values	Business Rules	Comments
AddressCorrection Notification BEGINS				
SubmittingParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
SubmittingSoftware	SubmittingSoftware complex type	-	Optional	Refer to this complex type in Section 4
CRID	CRIDType simple type	-	Optional	Refer to this simple type in Section 5
PushMessageID	String 25	-	Optional	-
Choice Block BEGINS			Optional Choice Block.	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5
MaildatJobID	jobIDType simple type	-	Required when Mail.dat is used	Refer to this simple type in Section 5
CustomerGroupID	String, 25 character	-	Optional	-
MailingGroupID	Non Negative Integer	-	Required when Mail.XML is used	-
Choice Block ENDS				
Notification Date	Date	yyyy-mm-dd	Required	-
FSNonFSAvailabilityDate	Date	yyyy-mm-dd	Required	-
AddressCorrection Notification ENDS				

3.1.3 AddressCorrectionQueryRequest

This is request message to pull COA data

Prerequisites

- Customer uses Mail.XML 14.0 spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each AddressCorrection QueryRequest message, the customer needs to provide information for all required blocks. The business rules defined below are not necessarily for required elements.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid ID.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives for the Mail.XML will always require:
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element
 - d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.
3. The OwningParty information can also be provided optionally, if the data is requested by third parties based upon existing profiles.
4. The customer shall also provide piece information such as optional piece ranges and job info, as well as date ranges by providing one or more PieceRequest blocks.

3.1.3.1 AddressCorrectionQueryRequest Field Description

AddressCorrectionQueryRequest				
Field	Format	Acceptable Values	Business Rules	Comments
AddressCorrectionQueryRequest BEGINS				
SubmittingParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
SubmittingSoftware	submittingSoftwareType complex type	-	Optional	Refer to this complex type in Section 4
SubmitterTrackingID	mailxml_base:s20		Required	Refer to this simple type in Section 5
OwningParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
Piece Request Block BEGIN			Required 1 to many allowed	
Mail Class	mailClassType simple type	-	Optional	Refer to this simple type in Section 5
Choice Block BEGIN			Optional	
LowerIMBRRange	iMBType simple type	-	Required	Refer to this simple type in Section 5
UpperIMBRRange	iMBType simple type	-	Required	Refer to this simple type in Section 5
Choice Block END				
Choice Block BEGINS			Optional Choice block. Either UserLicenceCode/MailIdatJobID OR	

AddressCorrectionQueryRequest				
Field	Format	Acceptable Values	Business Rules	Comments
			CustomerGroupID/MailingGroupID	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5
MaildatJobID	jobIDType simple type	-	Required when Mail.dat is used	Refer to this simple type in Section 5
CustomerGroupID	String, 25 character	-	Optional	-
MailingGroupID	Non Negative Integer	-	Required when Mail.XML is used	-
Choice Block ENDS				
Date Range Block BEGIN			Required block	
LowerDateRange	Date	yyyy-mm-dd	Required	This date is a <i>PostalOne!</i> date starting in March 2010 to make sure time delay issues, when the data is received by the <i>PostalOne!</i> system, does not have any impact to the customer querying the data.
UpperDateRange	Date	yyyy-mm-dd	Required	See Lower Date Range comment above.
Date Range Block END				
Piece Request Block END				
AddressCorrection QueryRequest ENDS				

3.1.4 AddressCorrectionQueryResponse

This message sends the actual COA data back to the requestor

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each AddressCorrection QueryResponse message, the *PostalOne!* system will provide the:

- Mandatory LargeTransactionDividerGroupType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions and records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
 - MessageGroupID – This is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.

- TotalMessageCount - This element tells the receiver that for MessageGroupID of 10, expect a total of X transactions, where X is a positive integer.
- MessageSerialNumber – This is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
- TransmittedRecordCount – This is a count of records in the current message transaction.
- TotalRecordsAcrossMessages – This is the total expected record count when all transactions have been received by the receiver for the MessageGroupID.
- LastMessage – This is an optional Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.

The AddressCorrectionQueryResponse has two major choice blocks. One is QueryResults and the other is QueryErrors.

1. In QueryResults:

- a. The customer will receive zero or more AddressCorrection blocks with job information and address correction information.
- b. The customer may also optionally receive Return Codes and Descriptions as part of the Query Results.

2. The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

3.1.4.1 AddressCorrectionQueryResponse Field Description

AddressCorrectionQueryResponse				
Field	Format	Acceptable Values	Business Rules	Comments
AddressCorrection QueryResponse BEGINS				
LargeTransactionDivi derGroupType	LargeTransactionDivi derGroupType attribute		Required	Refer to this attribute group in Section 4
TrackingID	String 20	-	Optional: Required when the block data is provided	
SubmitterTrackingID	mailxml_base:s20		Required	Refer to this simple type in Section 5
Choice Block BEGIN			Either QueryResults block or QueryError block will be returned	
QueryResult Block BEGINS				
LargeTransactionDivi derResult	LargeTransactionDivi derResult attribute	-	Optional	Refer to this attribute block in Section 4
AddressCorrection	AddressCorrection Type Complex Type	-	Optional: 0 to many	Refer to this complex type in Section 4
Query Result Block END				
Query Error Block BEGIN				
ReturnInfo	basicReturnInfoType complex type	-	Required	Refer to this complex type in Section 4
Query Error Block END				
Choice Block ENDS				
AddressCorrection QueryResponse ENDS				

3.1.5 ByForConflictDelivery

This message is pushed by USPS to customer end server providing By/For conflict data

Prerequisites

- Mailer has subscribed to receive ByForConflictDelivery messages.
- Mailer has subscribed to receive By/For Conflict Notification messages.
- Mailer submits Mail.dat jobs or Mail XML eDoc messages to the *PostalOne!* system
- USPS checks the availability of By/For Conflict data about discrepancy within the eDoc at different levels for the owner and preparer information.
- USPS pushes the notification message to the Mailer's web service end point.
- USPS pushes ByForConflictDelivery message to the Mailer's web service end point.

Business Rules

If the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the By/For Conflict detail data to the customer about By For Conflicts if the customer has registered for By For Conflict Delivery messages and shall send a delivery message to the customer

3.1.5.1 ByForConflictDelivery Field Description

ByForConflictDelivery				
Field	Format	Acceptable Values	Business Rules	Comments
LargeTransactionDivi derGroup OptionalType	LargeTransactionDivi derGroup OptionalType Attribute block	-	Required	Refer to this attribute block in Section 4
SubmittingParty	participantIDType complex type		Optional	Refer to this complex type in Section 4
SubmittingSoftware	SubmittingSoftware complex type		Optional	Refer to this complex type in Section 4
DataRecipient	dataRecipient Complex Type	-	Optional	Refer to this complex type in Section 4
PushMessageID	String 25	-	Optional	
ByForConflict	byForConflictType complex type	-	Required: 1 to many allowed	Refer to this complex type in Section 4

3.1.6 ByForConflictNotification

This message is sent by USPS to customer end server notifying them with the availability of By/For conflict data

Prerequisites

- Mailer has subscribed to receive By/For Conflict Notification messages
- Mailer submits Mail.dat jobs or Mail XML eDoc messages to the *PostalOne!* system
- USPS checks the availability of By/For Conflict data about discrepancy within the eDoc at different levels for the owner and preparer information.
- USPS pushes the notification message to the Mailer's web service end point

Business Rules

If the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide a date of notification and will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.

ByForConflictNotification Field Description

ByForConflictNotification				
Field	Format	Acceptable Values	Business Rules	Comments
SubmittingParty	ParticipantIDType complex type	-	Optional	Refer to this complex type in Section 4

ByForConflictNotification				
Field	Format	Acceptable Values	Business Rules	Comments
SubmittingSoftware	SubmittingSoftware complex type	-	Optional	Refer to this complex type in Section 4
PushMessageID	String 25	-	Optional	-
Choice Block BEGINS			Optional choice block. Either UserLicenseCode/MailJobID or CustomerGroupID/MailingGroupID can be provided.	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5
MailJobID	jobIDType simple type	-	Required when Mail.dat is used	Refer to this simple type in Section 5
CustomerGroupID	String, 25 character	-	Required when Mail.XML version 12.0B or higher is used	-
MailingGroupID	Non Negative Integer	-	Required when Mail.XML 12.0B or higher is used	-
Choice Block ENDS				
FSNonFSAvailabilityDate	Date	yyyy-mm-dd	Required	-
NotificationDate	Date	yyyy-mm-dd	Required	-

3.1.7 ByForConflictQueryRequest

This message is sent by customer to pull By/For conflict data

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates Mail.XML message
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each ByForConflictQueryRequest message, the customer needs to provide information for all required blocks.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid ID.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives from the customer for the Mail.XML will always require:
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element
 - d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.

3.1.7.1 ByForConflictQueryRequest Field Description

ByForConflictQueryRequest

Field	Format	Acceptable Values	Business Rules	Comments
byForConflictQueryRequest BEGINS				
SubmittingParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
SubmittingSoftware	SubmittingSoftware complex type	-	Optional	Refer to this complex type in Section 4
SubmitterTrackingID	mailxml_base:s20		Required	Refer to this simple type in Section 5
Choice Block BEGINS	-	-	Either userlicensecode/Mail datJobID OR CustomerGroupID/MailingGroupID be provided	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5
MaildatJobID	jobIDType simple type	-	Required when Mail.dat is used	Refer to this simple type in Section 5
CustomerGroupID	String, 25 character	-	Required when Mail.XML version 12.0B or higher is used	
MailingGroupID	Non Negative Integer	-	Required when Mail.XML is used	
Choice Block ENDS				
byForConflictQueryRequest ENDS				

3.1.8 ByForConflictQueryResponse

This message contains By/For data and is sent upon receiving the request message by customer

Prerequisites

- Customer uses Mail.XML 140A spec or higher
- USPS validates request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

The ByForConflictQueryResponse has two major choice blocks one is QueryResults and the other is QueryErrors.

1. In QueryResults
 - a. Data will be filtered based on the request criteria
 - b. The job information will be returned by the USPS *PostalOne!* system, and the Mail.dat Job information will be returned or Mail.XML job information will be returned. The Mail.dat Job ID and User License Code elements represent Mail.dat information and the Customer Group ID and MailingGroupID represent the Mail.XML/Postal Wizard information.
 - c. The customer will receive one or more ByForConflict blocks
 - d. The USPS as part of the QueryResults to communicate any issues can return an optional ReturnCode and Description.
2. The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

3.1.8.1 ByForConflictQueryResponse Field Description

ByForConflictQueryResponse

Field	Format	Acceptable Values	Business Rules	Comments
ByForConflictQueryResponse BEGINS				
LargeTransactionDividerGroupType Attribute	LargeTransactionDividerGroupType Attribute	-	Required	Refer to this attribute block in Section 4
TrackingID	String 20	-	Optional: Allows user to retrieve the data without resending the request message by using tracking ID in MRRR message	
SubmitterTrackingID	mailxml_base:s20		Required	Refer to this simple type in Section 5
Choice Block BEGINS			Either QueryResult or QueryError block is returned.	
QueryResult Block BEGIN			Required	
LargeTransactionDividerResult Block BEGIN			Optional	
LargeTransactionDivider BEGINS	-	-	Required. 1 to many allowed	-
TrackingID	String 20		Required	
LargeTransactionDivider ENDS				
LargeTransactionDividerResult Block END				
ByForConflict	byForConflictType complex type		Optional: 0 to many allowed	Refer to this complex type in Section 4
QueryResult Block END				
QueryError Block BEGIN				
ReturnInfo	basicReturnInfoType complex type	-	Required	Refer to this complex type in Section 4
QueryError Block END				
ByForConflictQueryResponse ENDS				

3.1.9 ContainerVisibilityDelivery

The Postal Service shares processing scan information of IMcb through Full Service at induction. Container Scan for IMcb in Non-Full Service is shared during induction through the eInduction process. IMtb tray scan information is also shared with customers for Full Service.

This is a push message to provide container visibility.

Prerequisites

- Mailer has subscribed to receive ContainerVisibilityDelivery messages
- Mailer submits Mail.dat jobs or Mail.XML eDoc messages to the *PostalOne!* system
- USPS validates Mail.XML messages
- USPS processes the Mail.dat jobs or Mail.XML messages, generates postage, and reports
- Postage statement finalization exposes data to SASP
- USPS interprets eDoc information, and performs Full-service verification

- USPS determines data recipients and Start-the-Clock
- USPS sends mailer feedback to the *PostalOne!* system
- USPS checks the availability of data to the mailer
- USPS pushes the Container Visibility message to the mailer's web service end point

Business Rules

With each ContainerVisibilityDelivery message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the:

- LargeTransactionDividerGroupOptionalType (OPTIONAL) - This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions, records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
- MessageGroupID – This is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.
- TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, where X is a positive integer.
- MessageSerialNumber – This is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
- TransmittedRecordCount – This is a count of records in the current message transaction.
- TotalRecordsAcrossMessages – This is the total expected record count when the receiver for the MessageGroupID has received all transactions.
- LastMessage – This is a Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID. For example: MessageGroupID 10.

SubmittingParty – The *PostalOne!* system for all Notification and Delivery messages will always put a value of 'USPS' in the MaildatUserLicense field.

- SubmittingSoftware – The *PostalOne!* system for all Notification and Delivery messages will always put:
 - The value of 'PostalOne' in the SoftwareName element
 - The value of 'USPS' in the vendor element
 - The most current version number available, such as 19.0 or 20.0 in the Version element
 - The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements

The CRID element is for industry usage and is optional. For the Delivery messages, the *PostalOne!* system will not populate this element. The *PostalOne!* system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML to the customer.

- The *PostalOne!* system will send one or more ContainerVisibility blocks.
- Electronic Shipping info Received - USPS received electronic Container or Tray information
- Entered at USPS - The Container was Entered at USPS <Facility Name>*
- Enroute Arrive - The Container or Tray arrived at <Facility Name>*
- Enroute - The Tray was processed at <Facility Name>*
- Enroute Departure - The Tray departed from <Facility Name>*
- *USPS name of Scan Facility

Full-service ACS™ COA and Nixie data grouping: All XML Messages for the Full-service ACS COA and Full-service ACS Nixie data are grouped by Mail.dat Job ID/User License Code OR Mailing Group/Container Group AND Data Recipient

CRID. The data recipient CRID is attached to the Full-service ACS transactions by the SASP system based upon the eDoc By/For and/or the MID profile.

3.1.10 ContainerVisibilityNotification

The Postal Service shares processing scan information of IMcb through Full Service at induction. Container Scan for IMcb in Non-Full Service is shared during induction through the elinduction process. IMtb tray scan information is also shared with customers for Full Service.

This is the Notification message to customer providing them information on their container.

Prerequisites

- Mailer has subscribed to receive ContainerVisibilityNotification messages
- Mailer submits Mail.dat jobs or Mail XML eDoc messages to the *PostalOne!* system
- USPS validates Mail.XML messages
- USPS processes the Mail.dat jobs or Mail.XML messages, generates postage, and reports
- Postage statement finalization exposes data to SASP
- USPS interprets eDoc information, and performs Full-service verification
- USPS determines data recipients
- USPS sends mailer feedback to the *PostalOne!* system
- USPS checks the availability of data to the mailer
- USPS pushes the notification message to the mailer's web service end point

Business Rules

With each ContainerVisibilityNotification message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide a Date of notification and provide the job information, either the Mail.dat Job ID and User License Code, or the Customer Group ID and MailingGroupID for Mail.XML to the customer, so the customer can use the Job information in their Query request.

3.1.11 ContainerVisibilityQueryRequest

This message is sent by customer to pull container visibility data

Prerequisites

- Customer uses Mail.XML 16.0 spec
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each ContainerVisibilityQueryRequest message, the customer needs to provide information for all required blocks.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid ID.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives for the Mail.XML will always require:
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element
 - d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a

valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.

3. The job information can also be provided optionally, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML by the customer.
4. The FAST appointment ID or the CSA Dispatch ID, created by the FAST system, can be provided optionally in the ConsigneeApptID or CSADispatchNumber elements respectively.
5. The customer can also optionally provide the 21-digit Pallet IMCB barcodes in the UniqueContainerBarcode element tied to the Mail.XML job information or Mail.dat Job information and can optionally provide the Locale Key of the Induction facility in the USPSInductionFacilityLocaleKey element.
6. The customer can also optionally provide the Mail.XML Container ID in the CustomerContainerID element tied to the Mail.XML job information or can optionally provide the Mail.dat ContainerID in the ContainerID element.

3.1.12 ContainerVisibilityQueryResponse

This message contains container visibility data and is sent upon receiving the request message

Prerequisites

- Customer uses Mail.XML 16.0 specification
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each ContainerVisibilityQueryResponse message the *PostalOne!* system will provide the:

- Mandatory LargeTransactionDividerGroupType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions and records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
- MessageGroupID – This is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.
 - TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, where X is a positive integer.
 - MessageSerialNumber – This is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
 - TransmittedRecordCount – This is a count of records in the current message transaction.
 - TotalRecordsAcrossMessages – This is the total expected record count when the receiver of the MessageGroupID has received all messages.
 - LastMessage – This is an optional Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.

The ContainerVisibilityQueryResponse has two major choice blocks. One is QueryResults and the other is QueryErrors.

1. In QueryResults:

- a. The job information will be returned by the USPS *PostalOne!* system, and the Mail.dat Job information will be returned or Mail.XML job information will be returned. The Mail.dat Job ID and User License Code elements represent Mail.dat information and the Customer Group ID and MailingGroupID represent the Mail.XML.
- b. The customer will receive zero or more ContainerVisibilityEntry blocks with container unload and scan information. The following Scan Types will be provided:
 - Entered at USPS - The container was entered at USPS <Facility Name>*
 - Enroute Arrive - The container arrived at <Facility Name>*
 - Enroute - The container was processed at <Facility Name>*
 - Enroute Departure - The container departed from <Facility Name>*
 - Out for Delivery - The container was sent out for delivery

*USPS name of Scan Facility

2. The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

3.1.13 DataQualityVerificationReportDelivery

This message is pushed by USPS and contains data quality verification report

Prerequisites

- Mailer has subscribed to receive DataQualityVerificationReportDelivery messages
- eDoc Data Quality Data Recipient Determination Process
- Mailer submits eDoc for a Job
- Postage Statement is Finalized
- USPS performs By/For Verification
- USPS validates whether Mail Owner MID provided in CPT/MPA/IMR record in eDoc.
- USPS identifies Mail Owner by MID based on Order of Preference
- USPS identifies Mail Preparer
- eDoc Data Quality Logging and Feedback Process
- USPS performs verifications on eDoc submitted
- USPS associates error records with eDoc containers, handling units, piece or piece range records

- USPS pushes the DataQualityVerificationReportDelivery message to the Mailer's web service end point

Business Rules:

If the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide a date of notification and will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer, report type, and details about the error

3.1.15 DataQualityVerificationReportQueryRequest

Customers send this message to USPS for the pull Data Quality Verification Error Report.

Prerequisites

- Mailer submits Mail.dat jobs, Mail XML or Postal Wizard eDoc to the *PostalOne!* system
- USPS validates Mail.XML messages
- USPS processes the Mail.dat jobs, Mail.XML messages or Postal Wizard
- USPS generates postage and reports
- Postage statement has been finalized by USPS
- USPS interprets eDoc information, and performs Full-service verification
- USPS checks the availability of eDoc data quality information to the mailer
- USPS responds to the DataQualityVerificationReportQueryRequest message to the mailer's web service end point.

Business Rules

The customer must provide job information, submitting party, submitting software, facility id, and the report type to retrieve the data quality verification report.

3.1.17 DeliveryResponse

The purpose of this message is to receive an acknowledgment from the customer when they receive a delivery message pushed by USPS.

Prerequisites

- USPS pushes data to the customer's web service end point using delivery messages
- Customer sends an acknowledgment using the DeliveryResponse Message

Business Rules:

- USPS expects a "DeliveryResponse" message from all customers who have been subscribed to receive "Delivery" messages from the USPS. This response confirms that delivery message has been successfully received by the customer.
- Every Delivery Message will have a unique message identifier (PushMessageID) that will be sent to the customer. Customer are encouraged to return the same PushMessageID in the DeliveryResponse message so that the *PostalOne!* system can reconcile the message delivery information.

3.1.22 NixieDetailDelivery

This is a push message to provide Nixie information.

Prerequisites

- Mailer has subscribed to receive NixieDetailDelivery messages
- ACS Data Recipient Determination Process
 - Mailer submits eDoc for a Job, Postage Statement is Finalized
 - USPS performs By/For Verification
 - USPS validates whether Mail Owner MID provided in CPT/MPA/IMR record in eDoc.
 - USPS identifies Mail Owner by MID based on Order of Preference
 - USPS looks up Data Distribution Profile by Mailer Owner's MID
 - USPS verifies whether Data Distribution Profile Exists
 - USPS determines Data Recipient CRID based on Profile
 - USPS attaches the Data Recipient CRID to the Piece/Piece Range Record
- ACS Association and Feedback Process
 - USPS receives ACS and Nixie records
 - USPS associates ACS and Nixie records with Piece/Piece Range records
 - USPS provides ACS Feedback to Data Recipient CRID attached to the Piece/Piece Range record
 - USPS pushes the NixieDetailDelivery message to the Mailer's web service end point

Business Rules

With each NixieDetailDelivery message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the:

1. OPTIONAL LargeTransactionDividerOptionalType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information

about how many total transactions and records to expect and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.

- a. MessageGroupID – This is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.
 - b. TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, where X is a positive integer.
 - c. MessageSerialNumber – This is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
 - d. TransmittedRecordCount – This is a count of records in the current message transaction.
 - e. TotalRecordsAcrossMessages – This is the total expected record count when the receiver of the MessageGroupID has received all messages.
 - f. LastMessage – This is a Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.
2. SubmittingParty – The *PostalOne!* system for all Notification and Delivery messages will always put a value of ‘USPS’ in the MaildatUserLicense field.
 3. SubmittingSoftware – The *PostalOne!* system for all Notification and Delivery messages will always put:
 - a. The value of ‘PostalOne’ in the SoftwareName element
 - b. The value of ‘USPS’ in the vendor element
 - c. The most current version number available, such as 19.0 or 20.0 in the Version element
 - d. The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements
 4. The CRID element is for industry usage and is optional. For the Delivery messages, the *PostalOne!* system will not populate this element.
 5. The *PostalOne!* system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.
 6. The *PostalOne!* system will send one or more NixieDetail blocks.
 - a. The ActionCode element will be used to identify the action taken for the returned mail for the following values:
 - i. ‘F’ = Forwarded
 - ii. ‘W’ = Wasted
 - iii. ‘R’ = Returned
 - iv. ‘U’ = Unable to determine action
 - b. The ClassNotificationType element will be used to identify the mail class of the mail piece that generated the ACS COA notification for the following values:
 - i. ‘A’ = Package Services (Bound Printed Matter)
 - ii. ‘B’ = First-Class
 - iii. ‘C’ = Periodicals Initial
 - iv. ‘D’ = Standard Mail
 - v. ‘F’ = Periodicals Follow-up
 - c. Reason Code - Reason mail element will be used to identify the reason for the returned mail for the following values:
 - i. ‘A’ = Attempted, not known
 - ii. ‘B’ = Returned for better address
 - iii. ‘D’ = Outside delivery limits

- iv. 'E' = In dispute
- v. 'I' = Insufficient Address
- vi. 'L' = Illegible
- vii. 'M' = No mail receptacle
- viii. 'N' = No such number
- ix. 'P' = Deceased
- x. 'Q' = Not deliverable as addressed/unable to forward
- xi. 'R' = Refused
- xii. 'S' = No such street
- xiii. 'U' = Unclaimed
- xiv. 'V' = Vacant
- xv. 'X' = No such office

3.1.23 NixieDetailNotification

This is the Notification message to customer for Nixie information.

Prerequisites

Mailer has subscribed to receive NixieDetailNotification messages.

- ACS Data Recipient Determination Process
 - Mailer submits eDoc for a Job, Postage Statement is Finalized
 - USPS performs By/For Verification
 - USPS validates whether Mail Owner MID provided in CPT/MPA/IMR record in eDoc.
 - USPS identifies Mail Owner by MID based on Order of Preference
 - USPS looks up Data Distribution Profile by Mailer Owner's MID
 - USPS verifies whether Data Distribution Profile Exists
 - USPS determines Data Recipient CRID based on Profile
 - USPS attaches the Data Recipient CRID to the Piece/Piece Range Record

- ACS Association and Feedback Process
 - USPS receives ACS and Nixie records
 - USPS associates ACS and Nixie records with Piece/Piece Range records
 - USPS provides ACS Feedback to Data Recipient CRID attached to the Piece/Piece Range record
 - USPS pushes the NixieDetailNotification message to the Mailer's web service end point

Business Rules

With each NixieDetailNotification message, if the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the:

1. SubmittingParty – The *PostalOne!* system for all Notification and Delivery messages will always put a value of 'USPS' in the MaildatUserLicense field.
2. SubmittingSoftware – The *PostalOne!* system for all Notification and Delivery messages will always put:
 - a. The value of 'PostalOne' in the SoftwareName element
 - b. The value of 'USPS' in the vendor element
 - c. The most current version number available, such as 19.0 or 20.0 in the Version element
 - d. The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements
3. The CRID element is for industry usage and is optional. For the Delivery messages, the *PostalOne!* system will not populate this element.
4. The *PostalOne!* system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.
5. The *PostalOne!* system will provide the NotificationDate, which is the date when the message is transmitted.

3.1.23.1 NixieDetailNotification Field Description

NixieDetailNotification

3.1.24 NixieDetailQueryRequest

This is request message to pull Nixie data

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each NixieDetailQueryRequest message, the customer needs to provide information for all required blocks. See below the business rule specific to fields.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid ID.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives for the Mail.XML will always require:
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element
 - d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.
3. The RequestorCRID can be used to identify the requestor through the company CRID.
4. The customer can also provide the 6-digit or 9-digit OriginalMailerID.
5. The customer shall also provide one or more PieceRequests with piece ranges, class, date range and job information.

3.1.24.1 NixieDetailQueryRequest Field Description

NixieDetailQueryRequest ENDS				

3.1.25 NixieDetailQueryResponse

This message sends the actual Nixie data back to the requestor

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request

- USPS returns response to the Customer

Business Rules

With each NixieDetailQueryResponse message, the *PostalOne!* system will provide the:

- Mandatory LargeTransactionDivideGroupType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions and records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
 - MessageGroupID – This is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.
 - TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, where X is a positive integer.
 - MessageSerialNumber – This is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
 - TransmittedRecordCount – This is a count of records in the current message transaction.
 - TotalRecordsAcrossMessages – This is the total expected record count when the receiver of the MessageGroupID has received all messages LastMessage – is an optional Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.

The NixieDetailResponse has two major choice blocks one is QueryResults and the other is QueryErrors.

1. In QueryResults:

- a. The customer will receive zero or more NixieDetail blocks with job info, original MID information and Nixie address information.
- b. The customer may also optionally receive Return Codes and Descriptions as part of the Query Results.

2. The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

3.1.25.1 NixieDetailQueryResponse Field Description

3.1.30 NotificationResponse

The purpose of this message is to receive an acknowledgment from the customer when they receive a notification message sent by USPS.

Prerequisites

- USPS sends a Notification message to the customer's web service end point regarding the availability of data to be pulled by the customer
- Customer send an acknowledgment using the NotificationResponse Message

Business Rules

USPS expected a "NotificationResponse" message from all customers who have been subscribed to receive "Notification" messages from the USPS. This response confirms that notification message has been successfully received by the customer.

3.1.30.1 NotificationResponse Field Description

NotificationResponse				
Field	Format	Acceptable Values	Business Rules	Comments
NotificationResponse BEGINS				
Choice Block BEGINS			Optional. UserLicenseCode/MaildatJobID OR CustomerGroupID/MailingGroupID be provided	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5

NotificationResponse ENDS				

3.1.31 StartTheClockDelivery

The purpose of this message is to deliver the StartTheClock data to recipient's server, i.e., customer's server.

Prerequisites

- Mailer has subscribed to receive StartTheClock Delivery messages
- Mailer submits Mail.dat jobs or Mail XML eDoc messages to the *PostalOne!* system
- USPS validates Mail.XML messages
- USPS processes the Mail.dat jobs or Mail.XML messages, generates postage, and reports
- Postage statement finalization exposes data to SASP
- USPS interprets eDoc information, and performs Full-Service verification
- USPS determines Data Recipients and Start-the-Clock
- USPS sends Mailer Feedback to the *PostalOne!* system
- USPS checks the availability of Start the Clock data to the mailer
- USPS pushes Start The Clock delivery data to the mailer's web service end point

Business Rules

- If the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide the:

- Job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer.
- Zero or more StartTheClockBMEUBlock blocks for the job
- Zero or more StartTheClockDropShipBlock blocks for the job
- Zero or more StartTheClockPlantLoadBlock blocks for the job
- In addition, optional return Info block in case of issues or no data found. All return codes and their descriptions for the Response messages will be made available by the USPS for implementation based upon the schedule made available in the External Timeline for IM implementation document.

3.1.31.1 StartTheClockDelivery Field Description

StartTheClockDelivery				
Field	Format	Acceptable Values	Business Rules	Comments
StartTheClockDelivery BEGINS

StartTheClockDelivery ENDS				

3.1.32 StartTheClockNotification

The purpose of this message is to provide notification to customers with the StartTheClock information.

Prerequisites

- Mailer has subscribed to receive StartTheClock Notification messages
- Mailer submits Mail.dat jobs or Mail XML eDoc messages to the *PostalOne!* system
- USPS validates Mail.XML messages
- USPS processes the Mail.dat jobs or Mail.XML messages, generates postage, and reports
- Postage statement finalization exposes data to SASP
- USPS interprets eDoc information, and performs Full-service verification
- USPS determines Data Recipients and Start-the-Clock
- USPS sends Mailer Feedback to the *PostalOne!* system
- USPS checks the availability of Start the Clock data to the Mailer
- USPS pushes the notification message to the Mailer's web service end point

Business Rules

If the customer has registered with the *PostalOne!* system to receive the message, the *PostalOne!* system will provide a date of notification and will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard to the customer, so the customer can use the Job information in his/her Query request.

3.1.32.1 StartTheClockNotification Field Description

StartTheClockNotification				
Field	Format	Acceptable Values	Business Rules	Comments

StartTheClockNotification

StartTheClockNotification ENDS				

3.1.33 StartTheClockQueryRequest

This message is sent by customer to pull StartTheClock data.

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

With each StartTheClockQueryRequest message, the customer needs to provide information for all required blocks. Business rules for some of the fields are given below; some are optional fields.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid id.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives from the customer for the Mail.XML will always require
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element
 - d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a

valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.

3. The FAST appointment ID or the CSA Dispatch ID, created by the FAST system, can be provided optionally in the ConsigneeApptID or CSADispatchNumber elements respectively.
4. The job information can also be provided optionally, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML/Postal Wizard by the customer.
5. The customer can also optionally provide the Permit information or publication number information to receive the StartTheClock data in PermitNumber, PermitType, and PermitZip4 elements or in the PublicationNumber element.
6. The customer must provide a date range in the LowerDateRange and UpperDateRange elements for all query requests.

3.1.33.1 StartTheClockQueryRequest Field Description

StartTheClockQueryRequest				
Field	Format	Acceptable Values	Business Rules	Comments
StartTheClockQueryRequest BEGINS				
SubmittingParty	participantIDType complex type	-	Optional	Refer to this complex type in Section 4
SubmittingSoftware	submittingSoftwareType complex type	-	Required	Refer to this complex type in Section 4
SubmitterTrackingID	Mailxml_base:s20		Required	Refer to this simple type in Section 5
Choice Block BEGIN			Optional: If provided then either ConsigneeApptID or CSADispatchNumber is required	
ConsigneeApptID	String 12	-	Required	-
CSADispatchNumber	String 10	-	Required	-
Choice Block END				
Choice Block BEGINS			Optional: Either UserLicenseCode/MaildatJobID or CustomerGroupID/MailingGroup ID or CustomerAccount block is required	
UserLicenseCode	userLicenseCodeType simple type		Required when Mail.dat is used	Refer to this simple type in Section 5
MaildatJobID	jobIDType simple type	-	Required when Mail.dat is used	Refer to this simple type in Section 5
CustomerGroupID	String, 25 character	-	Optional	-
MailingGroupID	Non Negative Integer	-	Required when Mail.XML is used	-
CustomerAccount	permitPublicationDataTy pe complex type	-	Required	Refer to this complex type in Section 4
Choice Block END				
LowerDateRange	Date	yyyy-mm-dd	Required	This date is a <i>PostalOne!</i> date starting in March 2010 to make sure

StartTheClockQueryRequest				
Field	Format	Acceptable Values	Business Rules	Comments
				time delay issues when the data is received by <i>PostalOne!</i> Does not have any impact to the customer querying the data.
UpperDateRange	Date	yyyy-mm-dd	Required	-See Lower Date Range comment above.
StartTheClockQueryRequest ENDS				

3.1.34 StartTheClockQueryResponse

This message contains StartTheClock data and is sent upon receiving the request message.

Prerequisites

- Customer uses Mail.XML 14.0A spec or higher
- USPS validates the request messages
- USPS retrieves the data based on the search criteria provided in the request
- USPS returns response to the Customer

Business Rules

The StartTheClockQuery Response has two major choice blocks one is QueryResults and the other is QueryErrors.

1. In QueryResults:
 - a. Data will be filtered based on the request criteria.
 - b. The job information will be returned by the USPS *PostalOne!* system, and the Mail.dat Job information will be returned or Mail.XML job information will be returned. The Mail.dat Job ID and User License Code elements represent Mail.dat information and the Customer Group ID and MailingGroupID represent the Mail.XML/Postal Wizard information.
 - c. The customer will receive one or more ClockStarted blocks. The block includes StartTheClockBMEUBlock, StartTheClockPlantLoadBlock, and StartTheClockDropShipBlock.
 - d. The USPS as part of the QueryResults to communicate any issues can return an optional ReturnCode and Description.
2. The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

6. WSDLs and XSDs

The WSDL specification are posted on RIBBS® and can be downloaded from the following location: [Web Service Description Language \(WSDLs\)](#)

The above RIBBS® URL provides WSDLs for both TEM and production environments. User should always use this link to access the correct and updated version of WSDLs in future.

6.1 Pull WSDL Links For TEM Environment

To consume the WSDL services, the customer must use one of the following URLs in the TEM environments:

USPS only accepts Message-Types WSDLs.

MESSAGE-TYPE WSDL URL Link(s)

The following link supports Mail.XML Modular Specification:

On the Modular XSD, the USPS supports the following WSDL points based on the Messages Group (Data Distribution). The WSDL endpoint for the message group will not change, will support multiple versions of Modular spec.

Data Distribution:

[Data Distribution WSDL](#)

6.2 Pull WSDL Links for Production Environment

To consume the WSDL services, the customer must use one of the following URLs in the Production environments:

USPS only accepts Message-Types WSDLs.

MESSAGE-TYPE WSDL URL Link(s)

The following link supports Mail.XML Modular Specification:

On the Modular XSD, we support following WSDL points based on the Messages Group (Data Distribution). The WSDL endpoint for the message group will not change, will support multiple versions of Modular spec.

Data Distribution:

[Data Distribution WSDL](#)

6.3 Push WSDLs Information

Customers interested in using the Push Subscription model to receive the data feedback automatically at a specified time to their servers must understand the following WSDL name change information for message-type WSDLs:

MESSAGE-TYPE PUSH WSDL

The customer needs to provide a URL for their Web Server and use the following WSDL that only supports Mail.XML 16.0.

For Mail.XML 16.0 – following WSDL name shall be used:

WSDL NAME: DataDistributionPushMailXML16.wsdl

6.4 Push Messages XSD Name Changes Information

The USPS is implementing a new XSD name to support Mail.XML 16.0 Push subscription messages.

7. Change History Archive

Data Distribution, Mail.XML 16.0 for Release 18 (November 2014) Edition 2 Change 2:

Date	Section	Title	Description
7/30/14	Various	N/A	Updated cover page, footer, roadmap to reflect Edition 2 publication date of August 1 and release deployment date of November 2014.

Data Distribution, Mail.XML 16.0 for Release 18 (October 2014) Edition 2 Change 1:

Date	Section	Title	Description
6/30/14	1.1.1	Mail.XML 16.0	Updated wording to reflect removal of Bundle Visibility requirements per PO! CR 4274.
6/30/14	3.1.20.1	MPSVISQueryRequest Field Description	Updated definition of QueryByScanState from pieceScanEventType to revert to MPSStateType (CR# 4274)
6/30/14	4.20	Complex Type:iMBMailpieceScanData	Updated to remove references to pieceScanEventType and revert to previous IMBScanRec definition (CR# 4274)
6/30/14	4.32	Complex Type: mPSRequestType	Updated to remove reference to pieceScanEventType and revert to previous ScanState format definition (CR# 4274)
6/30/14	4.36	Complex Type: scanEventType	Updated to remove reference to pieceScanEventType and revert to previous ContainerScanState format definition (CR# 4274)
6/30/14	5.153	simpleType: pieceScanEventType	Removed (CR# 4274)

Data Distribution, Mail.XML 16.0 for Release 18 (October 2014) Edition 2 Change 0:

Date	Section	Title	Description
6/25/14	Various	N/A	Updated cover page, footer, TOC

Data Distribution, Mail.XML 16.0 for Release 18 (October 2014) Edition 1 Change 2:

Date	Section	Title	Description
6/9/14	Various	N/A	Updated for version name change to remove errata designation - replaced 16.0A with 16.0

Data Distribution, Mail.XML 16.0 for Release 18 (October 2014) Edition 1 Change 1:

Date	Section	Title	Description
5/21/14	Various	N/A	Updated to reflect change in release date from July to August 2014

Data Distribution, Mail.XML 16.0 for Release 18 (October 2014) Edition 1 Change 0:

Date	Section	Title	Description
5/14/14	Various	N/A	Updated table of contents, index, footer, cover page
5/14/14	1.6	Roadmap of Mail.XML	Updated to add October 2014/Release 39

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 3 Change 2:

Date	Section	Title	Description
4/7/14	4.16	Complex Type: dqrContainerInfoType	Added missing element FullServiceIndicator
4/8/14	4.1, 5.4	Complex Type: addressCorrectionAddressType and simpleType: addressType	Corrected addressType format

Date	Section	Title	Description
4/8/14	4.17	Complex Type: foreignAddressType	Updated to revert back to previous values per CR removing this requirement from BNS 590
4/8/14	5.153	simpleType: pieceScanEventTypeType	Updated enumeration and corrected tag
4/8/14	1.1.1	Mail.XML 16.0	Updated enumeration
4/8/14	Various	N/A	Updated table of contents, index, footer

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 3 Change 1:

Date	Section	Title	Description
3/31/14	4.1, 4.3, 5.4	various	Updated to roll back Address Type changes per CR removing this requirement from BNS 590

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 3 Change 0:

Date	Section	Title	Description
3/27/14	1.1.1	Mail.XML 16.0	Updated per current requirements
3/27/14	1.6, 3.0	Roadmap of Mail.XML Message Choreography for Data Distribution	Removed the following messages from tables of 16.0 supported message types: <ul style="list-style-type: none">• AllApptCloseoutDelivery• AllApptCloseoutNotification• StaleContentDelivery• StaleContentNotification• USPSDeliveryContentUpdatedDelivery• USPSDeliveryContentUpdatedNotification
3/27/14	3.1.5, 3.1.6	AllApptCloseoutDelivery AllApptCloseoutNotification	Removed sections
3/27/14	3.1.31, 3.1.32	StaleContentDelivery, StaleContentNotification	Removed sections
3/27/14	4.38	Complex Type StaleContentNotificationElementType	Removed sections
3/27/14	3.1.35, 3.1.36	USPSDeliveryContentUpdatedDelivery USPSDeliveryContentUpdatedNotification	Removed sections
3/27/14	3.0	Message Choreography for Data Distribution	Updated ContainerVisibilityQueryResponse description to specify that it is based on latest scan event data.
3/27/14	3.1.14	ContainerVisibilityQueryResponse	Updated description to remove "Electronic Information Received" scan event; corrected formatting.
3/27/14	1.9	About this document	Updated to remove references to old message types & versions.

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 2 Change 3:

Date	Section	Title	Description
2/27/14	4,5	Complex and Attribute Groups Definitions; Simple Types	Updated IMbScanRec to use pieceScanEventTypeType; added simple type pieceScanEventTypeType as enumerated field (1-20) with definitions for 1-5
2/27/14	3	Message Choreography for Data Distribution	Updated MPSVisQueryRequest to use pieceScanEventTypeType

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 2 Change 2:

Date	Section	Title	Description
2/25/14	4.9	Complex type consigneeFacilityType	<ul style="list-style-type: none">• Updated company name from s40 to s255 (CR 1480)• Corrected typos in mailxml_defs:addressType
2/25/14	5.206	SimpleType s255	Added s255 simple type (CR 1480) for use in expanded CompanyName
2/25/14	1.1.1	Mail.XML 16.0	Updated section to add additional information on Scan

Date	Section	Title	Description
			Event enumeration; added information on support for expanded Company Name from 40 to 255 characters
2/26/14	2.2	Fulfillment of Unassociated ACS Records	Modified wording for clarity
2/26/14	2.3	ACS Billing	Modified wording for clarity
2/26/14	2.4	Deactivating Full Service Data Feedback for Delinquent Accounts	Removed language regarding disabling of MIDs and renamed section

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 2 Change 1:

Date	Section	Title	Description
2/20/14	1.6	Roadmap of Mail.XML	Removed column for April 2013 from table
2/20/14	3.1.11	ContainerVisibilityDelivery	Removed references to Mail.XML 11.0D
2/20/14	3.1.12	ContainerVisibilityNotification	Removed references to Mail.XML 11.0D
2/20/14	1.1.2	Mail.XML 14.0A	Removed section
2/20/14	5.19	SimpleType CharacteristicContentType	<ul style="list-style-type: none"> Updated definition of RR from "Reply Envelope or Reply Card" to "Earned Value" (per CR1624) Added missing definitions for EM, PM, HM (CR 1578, 1606)
2/23/14	4.17	ComplexType foreignAddressType	Modified to reflect Mail.XML 14.0A code (CR1635)
2/23/14	5.20	SimpleType CharacteristicFeeType	Added EM (Election Mail) and PM (Political Campaign Mailing) per CR 1578, 1606
2/23/14	5.21	SimpleType CharacteristicIncentiveType	<ul style="list-style-type: none"> Added EM (Election Mail) and PM (Political Campaign Mailing) per CR 1578 Added missing definitions for SS (Seasonal Sale), PP (Picture Permit), and PS (Product Sample) Added CO (Coupon Promotion) per CR 1587
2/23/14	5.215	Simple Type serviceCodeType	<ul style="list-style-type: none"> Added AA (Live Animal Transportation Fee) per CR 1580 Added DP (Day-old Poultry) per CR 1606 Added missing values DCE, SCE, CBM, IB, NP
2/24/14	4.1	Complex Type addressCorrectionAddressType	Corrected addressTypeType to mailxml_dd
2/24/14	5.166	Simple Type rateCategoryType	Remove unused elements (CR 1605): TE, TK, FF, FN and added missing elements C, C1

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 2 Change 0:

Date	Section	Title	Description
2/14/14	1.1	Program Overview	Corrected tech spec hyperlink
2/14/14	1.1.2	Mail.XML 12.0A and 12.0B	Removed section
2/14/14	1.1.2.1	Support for Mailer SubmitterTrackingID on Mail.XML Messages	Updated "Duplicate response" and "No Response" scenarios and examples
2/14/14	2.1.7	Error / Return Codes	Replaced fault code table with updated table
2/14/14	All	Cover, footer, Table of Contents, Index	Updated date, edition Updated Table of Contents and Index after section modifications

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 1 Change 2: published for Review 1/17/2014

Date	Section	Title	Description
1/16/14	N/A	Intro page	Corrected ACS designation from ® to ™

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 1 Change 1

Date	Section	Title	Description
------	---------	-------	-------------

Date	Section	Title	Description
1/14/14	All	Footer	Updated version number in file name
1/14/14	3.1.1	Address Correction Delivery	Updated Business Rules' description of AddressType type in Address Correction Block
1/15/14	4.0	Mail.XML 16.0 Complex and Attribute Groups Definitions	<ul style="list-style-type: none"> • Updated 4.1 addressCorrectionAddressType to use DD AddressTypeType instead of AddressType • Updated 4.3 addressType • Updated 4.17 foreignAddressType
1/15/14	4.0	Mail.XML 16.0 Complex and Attribute Groups Definitions	Updated 4.5 basicReturnInfoType
1/15/14	All	Entire document	Updated table of contents, index for changes to DD

Data Distribution, Mail.XML 16.0 for Release 17 (July 2014) Edition 1 Change 0:

Date	Section	Title	Description
1/2/14	1.1	Program Overview	Added overview of Mail.XML 16.0
1/2/14	1.6	Roadmap of Mail.XML	Added column for July 2014 version support to Table 1-1 Added messages to Table 1-2: AddressCorrectionAddressType AddressCorrectionInfoBlockType

Data Distribution, Mail.XML 14.0A for R16 (January 2014) Edition 1 Change 0: published for Review 10/25/2013

10/29/13	3.1.6	AllApptCloseoutNotification	Added Message
10/29/13	3.1.5	AllApptCloseoutDelivery	Added Message
10/29/13	Table 3-1	Message Choreography for Data Distribution	Added message information for AllApptCloseoutDelivery, AllApptCloseoutNotification, ContainerStatusDelivery, ContainerStatusNotification, StaleContentDelivery, StaleContentNotification, USPSDeliveryContentUpdatedDelivery, USPSDeliveryContentUpdatedNotification
10/28/13	Table 1-2	Messages supported in Data Distribution Mail.XML 14.0A	Deleted duplicate messages for ByForConflictDelivery and ByForConflictNotification
10/23/13	3	Message Choreography for Data Distribution	Alphabetized the table and messages
10/22/13	1.1.1	Mail.XML 14.0A	Added this section to the document
10/22/13	3	Mail.XML 12.0B Simple Types	Alphabetized whole section
10/22/13	4	Mail.XML 12.0B Complex and Attribute Groups Definitions	Alphabetized whole section
10/22/13	All	Entire Document	This document was derived from Mail.XML eDoc Version 12.0B of August 22, 2013

Data Distribution, Mail.XML 12.0B for R16 (January 2014) Edition 2 Change 0: published for Review 08/23/2013

Date	Section	Title	Description
8/22/13	1.1.5, 1.1.6, 1.1.7	Mail.XML 8.1, Mail.XML 10.0, Mail.XML 11.0D	Removed sections (No longer supported)
8/22/13	Header , Footer	All	Took version of document back down to 12.0B (15.0 not approved yet)
8/22/13	1.6	Roadmap of Mail.XML	Removed 15.0 version
8/9/13	1.6	Roadmap of Mail.XML	Added double asterisk to v15.0 in last column
8/9/13	1.6	Table 1-2	Removed duplicate rows ByForConflictDelivery and ByForConflictNotification
8/9/13	6.3	Push WSDLs	Removed reference to string-type

Data Distribution, Mail.XML 12.0B for R15 (October 2013) Edition 3 Change 0: published for Review MM/DD/YYYY

Date	Section	Title	Description
07/03/13	All	Entire Document	Removed references to Mail.XML v. 6.0, 7.0, 8.0, 9.0

Data Distribution, Mail.XML 12.0B for R15 (October 2013) Edition 1 Change 0: published for Review 05/13/2013 and without change 05/20/2013.

Date	Section	Title	Description
05/07/13	All	Entire Document	This document was derived from Mail.XML Tech Spec (eDoc) Version 10.0 of April 5, 2013

These are the changes from Mail.XML 12.0B Data Distribution Version 9.0 to Mail.XML 12.0B Data Distribution Version 10.0

Date	Section	Title	Description
6/11/13	2.1.7	Error/ Return Codes	Added Error Codes 7140, 7141, 7142, and 7143 to Table 2-6 in Section 2.1.7
2/27/13	1	Page Break	Inserted Page Break between end of the current document changes and the start of the document at section 1
2/27/13	6.236	simpleType: StandardFlatTypeType	Deleted this simple type because it was a duplicate of 6.206

These are the changes from Mail.XML 12.0B Data Distribution Version 8.0 to Mail.XML 12.0B Data Distribution Version 9.0

Date	Section	Title	Description
2/13/13	7.0	Section 7	Updated Section 7 so that it only includes WSDL and XSD information relevant to Mail.XML 12.0B
2/13/13	6.236	simpleType: StandardFlatTypeType	Deleted this simple type because it was a duplicate of 6.206

These are the changes from Mail.XML 12.0B Data Distribution Version 7.0 to Mail.XML 12.0B Data Distribution Version 8.0

Date	Section	Title	Description
1/18/13			Updated footer and header of the document
1/18/13			Added the Release 35 to the front page
1/18/13			Assigned a new style to the document
02/01/2013		Move Change History	Made and moved changed history to new Section 8 Change History Archive

These are the changes from Mail.XML 12.0B Data Distribution Version 6.0 to Mail.XML 12.0B Data Distribution Version 7.0

Date	Section	Title	Description
------	---------	-------	-------------

Date	Section	Title	Description
11/28/12	4.8,4.12,4.14, 4.24, 4.26		Fixed spelling of "TotalRecordsAccrossMessages" to "TotalRecordsAcrossMessages"
11/28/12	1.6	Roadmap of Mail.XML	Updated the list of supported messages

These are the changes from Mail.XML 12.0B Data Distribution Version 5.0 to Mail.XML 12.0B Data Distribution Version 6.0

Date	Section	Title	Description
10/31/12	4.8	FullServiceAddressCorrectionDelivery	Corrected the spelling of the attribute from "LargeTransactionDivideroptionalGroupType" to "LargeTransactionDividerGroupOptionalType"
10/31/12	1.6	Roadmap of Mail.XML	Updated the roadmap of supported version till April 2013
10/31/12	All		Removed references to generic Mail.XML version such as 9.0X or 9.X

These are the changes from Mail.XML 12.0B Data Distribution Version 4.0 to Mail.XML 12.0B Data Distribution Version 5.0

Date	Section	Title	Description
09/27/12			Updated the front page and footer for September 28 publication

These are the changes from Mail.XML 12.0B Data Distribution Version 3.0 to Mail.XML 12.0B Data Distribution Version 4.0

Date	Section	Title	Description
09/06/12	5.18	Complex Type: IMbMailpieceScanData	Added a section below the table to list out pipe-delimited fields, as well as enumerations for ScanState and BundleScanType.
09/06/12	6.236	simpleType: StandardFlatTypeType	Fixed header formatting for consistency

These are the changes from Mail.XML 12.0B Data Distribution Version 2.1 to Mail.XML 12.0B Data Distribution Version 3.0

Date	Section	Title	Description
08/15/12	1.6	Roadmap of Mail.XML	Updated text to reflect current status and versions Added column in table 1 for January 2013 – Release 33.0
08/15/12	1.13	PostalOne! WSDL Information	Updated formatting of headings (no underline) for consistency
08/15/12	1.15	Exceptions	Updated table for current version, release, & date information
08/15/12	2.1.4	What is Push Model/Subscription method?	Revised the first sentence
08/15/12	2.5	General Considerations when using Full-service Query Request messages	Updated for current versions and dates
08/15/12	4.10	AddressCorrectionQueryResponse	Revised text following letter "f"
08/15/12	4.12	ContainerVisibilityDelivery	Fixed alignment mismatch
08/15/12	4.14	ContainerVisibilityQueryResponse	Sec 4.14, p. 80:Revised text in first sentence Corrected spelling error from bloc to block
08/15/12	4.28	StartTheClockDelivery	Fixed alignment under Business Rules
08/15/12	4.0	Mail.XML 12.0A Data Feedback Messages	Updated SubmitterTrackingID to be a Required field
08/15/12	4.0	Mail.XML 12.0B Data Feedback Messages	Updated SubmitterTrackingID to be a Required field
08/15/12	7.0	Section 7	Corrected index entries highlighted or in yellow text to be black

These are the changes from Mail.XML 12.0B Data Distribution Version 2.0 to Mail.XML 12.0B Data Distribution Version 2.1

Date	Section	Title	Description
07/27/12	4.20.1	MPSVisQueryResponse	Added comments to the description of the fields
07/27/12	4.21.1	MPSVisDelivery	Added comments to the description of the fields
07/27/12	4.22.1	MPSVisQueryNotification	Added comments to the description of the fields
07/27/12	4.0	Mail.XML 12.0B Data Feedback Messages	Replaced "Refer to this attribute block in Section 6" with "Refer to this attribute block in Section 5" because attribute blocks are documented in Appendix
07/12/12	4.0		Redesigned the cover page

These are the changes from Mail.XML 12.0B Data Distribution Version 1.3 to Mail.XML 12.0B Data Distribution Version 2.0

Date	Section	Title	Description
07/05/12	4.0		Removed the ScanSTCReconciliation message set (Notification, Delivery, QueryRequest, QueryResponse) because these messages are not supported in Release 31
07/05/12	2.1.7	Full-service Data Feedback Messages Supported in 8.1 Mail.XML Specification	Removed section 2.1.7 because it was focused on Mail.XML 8.1
07/05/12	2.1.8	Full-service Data Feedback Messages Supported in 10.0A Mail.XML Specification	Removed section 2.18 because it was focused on Mail.XML 10.0A
07/05/12	All		Added a header to the pages prior to p.225
07/05/12	7.0	Appendix	Removed the italics formatting from text and URLs under Message-Type WSDL URL Link(s) section. Updated hyperlinks for consistency in text style (Arial 10-pt)
07/03/12		Index	Removed the highlights in text entries of the Index section

These are the changes from Mail.XML 12.0B Data Distribution Version 1.2 to Mail.XML 12.0B Data Distribution Version 1.3

Date	Section	Title	Description
06/13/12	All		Updated cover and version numbering for July 6 and 9 Publications for RIBBS

These are the changes from Mail.XML 12.0B Data Distribution Version 1.1 to Mail.XML 12.0B Data Distribution Version 1.2

Date	Section	Title	Description
5/15/12	All		Removed watermark and updated the document cover and footer for May 18 Initial Publication for RIBBS for October 2012 Release
05/15/12	1.6	Roadmap of Mail.XML	Updated the roadmap table to include the Mail.XML supported version in October 2012
05/15/12	All		Updated the table labels in the document

These are the changes from Mail.XML 12.0B Data Distribution Version 1.0 to Mail.XML 12.0B Data Distribution Version 1.1

Date	Section	Title	Description
05/04/12	All		Updated cover and version numbering for May 18 Initial Publication for RIBBS

These are the changes from Mail.XML 12.0A Data Distribution Version 4.0 to Mail.XML 12.0B Data Distribution Version 1.0

Date	Section	Title	Description
04/30/12	6.239	DMLTypeType	Added a description to the simple type DMLTypeType (Detached Mailing Label Indicator)A = Detached Address LabelB = Detached Marketing Label

Date	Section	Title	Description
04/30/12	6.155	rateCategoryType	Added the following enumerations to simple type rateCategoryTypeTE = 5-DigitTK = SCFTQ = NDCTR = Mixed NDC for Parcel Select LightWeight
04/25/12	6.219		Added a description to the enumeration in simpleType: s31
04/25/12			Removed the following simple types from the technical specification because they do not exist in the Mail.XML 12.0B XSDssimpleType: bundleLevelTypesimpleType: componentIDTypesimpleType: componentWeightTypesimpleType: containerGroupingDescriptionTypesimpleType: containerType simpleType: cptPeriodicalAdPercentageTypesimpleType: cptPeriodicalAdPercentageBasisTypesimpleType: cptPeriodicalAdPercentageStatusTypesimpleType: daysTypesimpleType: dec03-2simpleType: dec04-3simpleType: dec18-6simpleType: dec10-4simpleType: eMD8125ASNBarcodeTypesimpleType: es2simpleType: es31simpleType: fASTContentIDTypesimpleType: inOutCountyIndicatorTypesimpleType: int04simpleType: maildatRecordStatussimpleType: mailIssueTypesimpleType: mailXMLStatusTypesimpleType: moveUpdateTypesimpleType: ns08simpleType: ns13simpleType: n04simpleType: newAddressTypesimpleType: periodicalStatementTypesimpleType: postageStatementStateTypesimpleType: pvdsContainerSubTypesimpleType: recipientTypesimpleType: s72simpleType: s255simpleType: segmentIDTypesimpleType: unloadStateTypesimpleType: USPSPriceIncentiveTypesimpleType: incentiveTypeTypesimpleType: container24CharacterBarcodeType
04/23/12	5.32	MidEntryType	Removed this complex type from the Data Distribution specification because it is rather a MID-CRID complex type
04/23/12	5.10	CRIDEntryType	Removed this complex type from the Data Distribution specification because it is rather a MID-CRID complex type
04/23/12	5.25	LegalAknowledgmentBlockMIDType	Removed this complex type from the Data Distribution specification because it is rather a MID-CRID complex type
04/23/12	5.24	LegalAknowledgmentBlockCRIDType	Removed this complex type from the Data Distribution specification because it is rather a MID-CRID complex type
04/23/12	2.2	Profile Management Overview	Removed this section and its sub-section given that these functionality are documented in the MID-CRID Tech spec.
04/23/12	1.6	Roadmap of Mail.XML	Removed the following message USPSCRIDCreateRequestUSPSCRIDCreateResponseUSPSMIDCreateRequestUSPSMIDCreateResponsefrom the table of Profiles and Full-service Data Feedback Messages
04/23/12	4.42	USPSCRIDCreate Response	Removed USPSCRIDCreateResponse because it is rather a MID-CRID message and its data structure. This message is already documented in the MID-CRID technical specification
04/23/12	4.41	USPSCRIDCreate Request	Removed USPSCRIDCreateRequest because it is rather a MID-CRID message and its data structure. This message is already documented in the MID-CRID technical specification
04/23/12	4.40	USPSMIDCreateResponse	Removed USPSMIDCreateResponse because it is rather a MID-CRID message and its data structure. This message is already documented in the MID-CRID technical specification
04/23/12	4.39	USPSMIDCreateRequest	Removed USPSMIDCreateRequest because it is rather a MID-CRID message and its data structure. This message is already documented in the MID-CRID technical specification
04/18/12	6.127	mailXMLPresentationCategoryType	Added enumeration C = Consolidated Internal Copal job with linked logical and presort mailings to the simple Type mailXMLPresentationCategoryType
04/18/12	6.191	rateType	Added the description "M = Parcel Select Regional Ground Mailing" to replace the placeholder

These are the changes from Mail.XML 12.X Data Distribution Version 3.0 to Mail.XML 12.0A Data Distribution Version 4.0

Date	Section	Title	Description
04/16/12	All		Replace Mail.XML 12.X with Mail.XML 12.0A throughout the document given that 12.0A is the version scheduled to be supported for Release 10 – June 2012

These are the changes from Mail.XML 12.X Data Distribution Version 2.1 to Mail.XML 12.X Data Distribution Version 3.0

Date	Section	Title	Description
04/09/12	All		Updated cover and version numbering for April 10 Final Publication for RIBBS
04/09/12	All		Removed the DRAFT watermark seal

These are the changes from Mail.XML 12.X Data Distribution Version 2.0 Mail.XML 12.X Data Distribution Version 2.1

Date	Section	Title	Description
03/13/12	All		Updated document front page and footer
03/14/12	1.5	USPS® Limitation Rule on Transaction Requests	Added a disclaimer to inform users/mailers the statement and limitation in this section are under review by the USPS. Updates for this section will be provided in the next Mail.XML technical specification publication.

These are the changes from Mail.XML 12.X Data Distribution Version 1.1.0 to Mail.XML 12.X Data Distribution Version 2.0

Date	Section	Title	Description
03/02/12	All		Updated footer and header
03/02/12			Added a new disclaimer on the second page of the document
02/24/12	All		Updated document, revised formatting and added "DRAFT" watermark
02/20/12	6.105	simpleType: includedInOtherDocType	Added enumeration I (I = Internal co-palletization) to simple type IncludedInOtherDocType
02/20/12	6.289	simpleType:ContainerScanStateType	Added spaces inside simpleType:ContainerScanStateType enumeration value descriptions
02/20/12	4.14.1	ContainerVisibilityQueryResponse Data Structure	Replaced LargeTransactionDivideGroupType with LargeTransactionDivideGroupOptionalType
02/20/12	5.5	ComplexType: ContainerVisibilityEntry	Updated the complex Type ContainerVisibilityEntry to include ScanEventType
02/20/12	5.40	ComplexType: ScanEventType	Added a new complex type ScanEventType

These are the changes from Mail.XML 12.X Data Distribution Version 1.0.0 posted on RIBBS (December 23, 2011) to Mail.XML 12.X Data Distribution Version 1.1.0. (Note: The final Mail.XML version will be confirmed by the USPS after design is completed.)

Date	Section	Title	Description
01/03/12	All		Update Footer and Cover page with correct version number and revision date Added USPS Foreword on 2 nd page to describe scope of Change request (CRs) included for Jan 9, 2012 publication
12/29/11	All		Replaced "Refer this complex type in Section 5" by "Refer to this complex type in Section 5"
12/29/11	All		Replaced "Refer this simple type in Section 6" by "Refer to this simple type in Section 6"
12/29/11	5.5	ContainerVisibilityEntry	Specified ConsigneeApptID in ContainerVisibilityEntry to be Optional but (Required when CSADispatchNumber is not provided)

Date	Section	Title	Description
12/29/11	4.13.1	ContainerVisibilityQueryRequest Data Structure	Updated ConsigneeApptID from a string of 9 to 12 characters in ContainerVisibilityQueryRequest message
12/29/11	1.1	Program Overview	Updated the texts respective to the overview of each Mail.XML version
12/26/11		Header & Footer	Updated header and footer

These are the changes from Mail.XML 11.0D Data Distribution Version 1.1.0 Posted on RIBBS (November 23, 2011) to Mail.XML 12.X Data Distribution Version 1.0.0

Dates	Section	Title	Description
12/12/11	6.288	MPSStateType	Updated SimpleType: MPSState field enumerations from 12 to 30
12/12/11	6.289	ContainerScanStateType	Added SimpleType:ContainerScanType
12/12/11	5.5	ContainerVisibilityEntry	Deleted ScanStateField, and added new simple types City, State, and ContainerScanStateDeleted MPSStateType field
12/12/11	1.6	Roadmap of Mail.XML	Updated the table of supported Mail.XML version to include Mail.XML 12.X Updated the table of Profiles and Full-service Data Feedback Messages List by Mail.XML Versions
12/12/11	All	TrackingID	Updated the length of SimpleType:TrackingID from s12 to s20
12/13/11	All	FullService	Removed "FullService" prefix from messages names throughout the document.
12/13/11	4.23	StartTheClockNotification	Removed FullServiceAvailabilityDate by FSNonFSAvailabilityDate and ensured that FullServiceIndicator is removed from StartTheClockNotification message
12/13/11	4.13	ContainerVisibilityQueryRequest	Add DateRange Element in the ContainerVisibilityQueryRequestVerified that ConsigneeApptID and CSAID are optional fields.
12/13/11	4.11	ContainerVisibilityNotification	Make the sequence containing the fields AvailableRecoordCount and CountType unbounded (max occurrences).Verified that NonFullServiceAvailabilityDate is removed from ContainerVisibilityNotification
12/13/11	4.0	Mail.XML 11.0 Data Feedback and Profile Management and Miscellaneous Messages	Verified removal of Mail Piece Scan Visibility Notification message set (MPSVisibilityNotification, MPSVisibilityDleivery, MPSVisibilityQueryRequest, MPSVisibilityQueryResponse).
12/13/11	5.6	ComplexType:clockStartedType	Updated StartTheClockDropShipOrOrigin inside ComplexType:clockStartedType to include City and State after USPSSLocaleKey
12/13/11	5.14	ComplexType: dqrContainerInfoType	Updated ComplexType: dqrContainerInfoType to include City and State after USPSSLocaleKey
12/14/11		SimpleType:ServiceCodeType	Updated SimpleType:ServiceCodeType by adding enumeration CODE = Electronic Collect on Delivery
12/14/11	4.19-4.22		Added Mail Piece Scan Visibility message set MPSVisNotification, MPSVisDelivery, MPSVisQueryRequest,MPSVisQueryResponse
12/14/11	4.30-4.33		Added Scan Start The Clock Reconciliation message set ScanSTCReconciliationNotification, ScanSTCReconciliationDelivery, ScanSTCReconciliationQueryRequest, ScanSTCReconciliationQueryResponse
12/14/11	5.40		Added Complex Type: ScanSTCCount in support to ScanSTCReconciliation messages
12/16/11	6.126	mailXMLContainerType	Updated two fields in simpleType: mailXMLContainerTypeFrom:13 = OD Full Postal Paks14 = OD Half Postal PaksTo:13 = OD Full Pallet Box (Surface

Dates	Section	Title	Description
			Only)14 = OD Half Pallet Box (Surface Only)

These are the changes from RIBBS Version 1.0.0 (Sept 30, 2011) to Version 1.1.0

Dates	Section	Title	Description
11/10/2011		Section 5 – Mail.XML 11.0D Complex and Attribute Groups Definitions	Updated byForConflictType from s50 to string
11/10/2011		Section 5 – Mail.XML 11.0D Complex and Attribute Groups Definitions	Updated ConsigneeApptID and CSADispatchNumber inside ContainerVisibilityQueryRequest
11/07/2011	All	Footer and Header	Updated footer and header

These are the changes from RIBBS Version 9.3.8 (Aug 9, 2011) for release 29 (Jan 8) to RIBBS Version 9.3.8 (Aug 9, 2011).

These changes are being implemented to contribute to the goal of breaking down and editing the Postal Service Mail.XML technical specifications by Mail.XML supported versions to facilitate editing and enhance readability and navigation throughout the document.

In addition, to easier navigation, some sections such as the appendixes have been reorganized.

Previously the technical specifications were just divided by function (eDoc, Data Distribution, FAST). In that scheme, all supported Mail.XML for each release were all combined in one technical specification per function release. i.e. For Release 28 (November 2011) the Mail.XML eDoc technical specification included the supported Mail.XML versions 9.0B, 9.0C and 10.0C, as while the FAST technical specification containing Mail.XML 8.0B and 10.0 versions.

This approach resulted sometimes in bulky document that became difficult to edit, manage or read as with documents mounting up to sometimes 1000 pages.

With the new editing process, the technical guides are edited focusing on the Mail.XML supported version per function.

For instance, the FAST guide supporting Mail.XML 8.0B and 10.0 versions will have two different sub-Technical specifications for Release 29 (January 2012).

Each technical specification will also group all Mail.XML version and their respective supported errata versions.

For instance, 9.0B and 9.0C supported in eDoc technical specification for Release 28 are combined in one document since they are errata for Mail.XML 9.0. However if Mail.XML 8.0B and 8.1 were supported, they would have been in two different documents since they are not of the same Mail.XML version.

By convention, Mail.XML version name containing a letter, such as 7.0C, 9.0B, 10.0A are considered errata. In contrast, Mail.XML 8.0 and 8.1 are considered two different versions.

Date	Section	Title	Description
09/29/2011	All		Replaced Mail.XML 11.0A by Mail.XML 11.0B throughout the document to update the version supported in January 2012.
09/29/2011	4.0	Mail.XML 11.0 Data Feedback and Profile Management and Miscellaneous Messages	Removed Full-Service word from the highlighted four NonComplianceDataWithPostageOwed and NixieDetail messages to comply to reflect Mail.XML 11.0 requirements
9/07/2011	6.0	Section 6 – Mail.XML 11.0B Simple Types Data Structure	Updated the rateCategoryType and DMLType, and mail.XMLContainerType based on Mail.XML 11.0B CRs as of 9/05/2011
9/01/2011		Change History	Added a new column “Date” to the table of Change History to record the dates of implemented changes.
8/31/2011	5.0	Appendix A	Added new headers to the tables of Complex and Attribute Data Types Data Structure for Mail.XML 10.0A

Date	Section	Title	Description
8/31/2011	5.0	Appendix A	Added new headers to the tables of Complex and Attribute Data Types Data Structure for Mail.XML 11.0B
8/31/2011	4.0	Mail.XML 11.0 Data Feedback and Profile Management and Miscellaneous Messages	Added headers to the table of Mail.XML 11.0B messages
8/31/2011	4.0	Mail.XML 11.0 Data Feedback and Profile Management and Miscellaneous Messages	Added headers to the table of Mail.XML 11.0B messages
8/31/2011	5.0,6.0,7.0	Section 5, B, C	Reorganized the appendixes order
8/24/2011		Footer	Updated the footer to include USPS® – Postal Service Mail.XML 11.0B Technical Specification Version 1.0
8/24/2011	All		Extracted Mail.XML Technical Specification from the previous Data Distribution Technical Specification submitted on RIBBS on August 9, 2011
